AN ACTION—BASED COMPREHENSIVE ECONOMIC DEVELOPMENT STRATEGY

The St. Louis Economic Development Partnership (SLEDP) was formed in 2013 by merging economic development components of the St. Louis Development Corporation, representing the City of St. Louis, with the St. Louis County Economic Council, representing St. Louis County. With the economic development merger, this is the first Comprehensive Economic Development Strategy (CEDS) prepared for the joint organization. Both the City and the County have adopted their own CEDS plans in prior years. To maximize the positive impacts of the CEDS, therefore, the SLEDP and SLDC agreed to work jointly in creation of the current CEDS.

More than 1.3 million people live in the City and County, making up nearly half of the St. Louis metropolitan area, which has 2.8 million people spread over 15 counties. The City and the County are the only counties (thinking of the City of St. Louis as its own county) in the metro area where there are more jobs during the day than labor force at night. All the other 13 counties are “net bedroom communities” from which more workers commute into St. Louis City and County than the other way around. According to the U.S. Bureau of Economic Analysis (BEA), in 2014, there were 1.04 million jobs located in the City and County. This amounted to 61 percent of all jobs in the metro area. But the City-County share was higher in 2001 at 1.06 million jobs or 65 percent of the metro area. In fact, both jurisdictions lost jobs between 2001 and 2014 (a combined decline of 24,000 jobs) while the rest of the metro area added 85,000.

The challenge is apparent. While it is, of course, desirable that the metropolitan area expand in terms of jobs, population, and prosperity, the City and County are losing ground—both numerically and relatively. The closing of major automobile assembly plants over the last decade and a half has certainly contributed to that decline. There have also been many shifts to and growth in other counties, quite often leaving behind a substantial amount of vacant land and buildings in older parts of the region. Redevelopment and reinvestment, therefore, become high priorities for the SLEDP and SLDC. While many people think that the City and County are “built out,” there is, in fact, a great deal of real estate (undeveloped land and underutilized structures) available for additional growth, a topic addressed throughout this CEDS.

Closings of plants, potential declines in federal government defense spending, shifts of population and labor force to other parts of the region, the nation, and even the world, and increasing competitiveness of larger cities and regions also raise concerns about the resilience of the St. Louis economy to adapt to cultural changes. St. Louis, as a region, has rebounded in the past. Net decreases in regional population in the 1970s were followed by growth, albeit slower than before, since then. Heavy dependency on the auto and defense industries through the 1990s triggered regional initiatives to diversify and expand the metro economy. Today, metro St. Louis is among the most balanced regional economies in the United States. Slow growing, perhaps, but more resilient to national and international business cycles than 40 or 50 years ago.

A new era, and new challenges, demand a new plan. This Comprehensive Economic Development Strategy reflects another fresh look at the economies of St. Louis City and County and their role in the bi-state St. Louis region. A CEDS Strategy Committee worked from December 2015 to December 2016 to identify critical issues and actions to strengthen the economy. But this was not the only effort in recent years. In fact, many of the recommendations of this CEDS are built on over a dozen related plans and studies since 2011. These range from transit-oriented development plans and market studies to riverfront development strategies to infrastructure improvements to workforce improvement recommendations emanating from longstanding regional challenges. There is no shortage of good ideas, excellent analysis, positive attitudes, and willingness to act. The focus of this five-year CEDS, therefore, is on action. A great many implementable projects are identified, many of them emerging from other economic and public engagement efforts.

ACKNOWLEDGEMENTS

Elected Officials

The Honorable Steven V. Stenger, *St. Louis County Executive*
The Honorable Francis G. Slay, *Mayor, City of St. Louis*

St. Louis Economic Development Partnership

Sheila Sweeney, *Chief Executive Officer*
Rodney Crim, *President*
Kevin S. Cahill, *Vice President for Strategic Initiatives*
Jamey Edgerton, *Senior Vice President for Business Retention and Expansion*
Michelle Stuckey, *Vice President for Business Retention and Expansion*

SECTION ES

EXECUTIVE SUMMARY

This is the first ever Comprehensive Economic Development Strategy (CEDS) prepared for the St. Louis Economic Development Partnership, which was formed in 2013 to represent the merger of joint economic development duties of St. Louis City and County. As independent jurisdictions, the City and County have developed individual CEDS over the years, but this CEDS reflects a fresh look at their economies and shared role in the bi-state region. A new era, and new challenges, demand a new plan, but more importantly, this document represents an opportunity for sustained regional alignment and collaboration.

EXECUTIVE SUMMARY

Explore St. Louis

Moving Forward with Collaboration

As the first ever Comprehensive Economic Development Strategy (CEDS) prepared for the St. Louis Economic Development Partnership, this document represents a tremendous opportunity for sustained regional alignment and collaboration. The fragmentation of governance in the St. Louis region is part of its history—St. Louis City separated from the County more than 140 years ago and remains an independent city, while shifting regional population throughout the 20th Century, contributed to the formation of 90 municipalities in St Louis County.

As a momentous step forward, the St. Louis Economic Development Partnership (SLEDP) was formed in 2013 by merging many of the economic development duties of the City and County to pave the way for more effective collaboration and joint prosperity. As independent jurisdictions, the City and County have developed individual CEDS over the years, but this CEDS reflects a fresh look at their joint economies and shared role in the bi-state region. A new era and new challenges demand a new plan.

Section 1: Regional Profile

St. Louis City and County are the economic drivers of the region, home to the region's primary employment, recreational, and cultural activity centers. As a result, the prosperity of the region is intrinsically linked to the successes and future direction of the City and County. However, as population continues to shift to other parts of the region (or other regions altogether), the City experienced decades of population loss, and the County has generally had a stable population since the 1970s. The City and County are faced with a choice: better utilize existing assets to remain competitive, or lose ground to other growing regions.

The development of the following CEDS could not come at a more critical time. The St. Louis regional economy is essentially on two divergent paths—some metrics indicate that it is well-diversified and resilient with a highly skilled workforce, higher-than-average income levels, and a burgeoning innovation and entrepreneurship ecosystem. On the other hand, parts of the region suffer from the effects of segregation, concentration of poverty, and income inequality, offering limited opportunities for upward mobility. The Promise Zone (see page 15) is a natural connection to other collaborative efforts such as Forward Through Ferguson, which creates a racial equity lens on initiatives throughout the region.

Section 2: Distressed Properties

After decades of disinvestment in many parts of the region, vacancy and abandonment are persistent problems—roughly a quarter of the parcels in St. Louis City and around eight percent of parcels in St. Louis County are considered distressed. These parcels are largely located in North St. Louis City and Inner North County, but even South City neighborhoods have numerous underperforming properties. There is an immediate need for the City and County to better coordinate efforts for identifying and tracking distressed properties, consolidating them into larger development sites where appropriate and preparing them for reuse, especially those with hazardous environmental conditions.

Though these parcels can be viewed as barriers to growth, with the proper funding, programs, and coordination, they also provide a tremendous opportunity for new development. Vacant and/or distressed properties provide opportunity sites for major regional redevelopment efforts, transit-oriented development, and MetroLink expansion, implementation of Great Rivers Greenways regional master plan, and realization of the St. Louis Regional Freight district plan.

Section 3: Disaster and Resiliency

In the St. Louis region, disaster recovery is typically associated with natural disasters such as flooding or tornado damage, but the region must also be prepared for a number of potential man-made disasters, including the failure of aging and potentially hazardous infrastructure or economic shocks such as major layoffs or recession.

In the face of these vulnerabilities, the St. Louis region has demonstrated a strong commitment to collaboration and coordination in mitigating the risk of, preparing for, and responding to potential incidents. Regional plans and programs have been adopted to bring together disparate systems and to educate both leaders and the public on how to be prepared and resilient, including the 2015-2020 St. Louis Regional All Hazard Mitigation Plan developed by the East-West Gateway Council of Governments and formation of the St. Louis Area Regional Response System (STARRS), which is a consortium of regional organizations that work together to coordinate and collaborate on regional responses to “large-scale critical incidents.”

EXECUTIVE SUMMARY

Section 4: Transit-Oriented Development Potentials

Unlike many of its peer regions, St. Louis has a dedicated light rail system (MetroLink) connecting residents to primary employment centers, academic institutions, recreational amenities, tourist attractions, and transportation hubs. This existing infrastructure presents tremendous opportunities for transit-oriented development (TOD) and expansion into underserved markets. The potential to create successful developments around MetroLink stations is significant, positioning the City and County to seize upon the lifestyle preferences of younger generations and empty nesters who increasingly want to live in walkable urban environments, but at the same time, also creating a transportation system that promotes equitable access to economic opportunity.

Most of the strategic direction for TOD in the region is provided in the 2013 *St. Louis TOD Framework Master Plan*. The plan is one of many development plans and related studies conducted as part of OneSTL, the region's sustainability plan, sponsored by East-West Gateway Council of Governments.

Section 5: SWOT

The analysis of the City and County's relative strengths, weaknesses, opportunities, and threats (SWOT) is supported by 21 existing plans produced during the past ten years as well as feedback from the CEDS Strategy Committee. The City and County have many assets to build upon with their high-value target sectors (finance, healthcare, logistics and biosciences), institutions of higher education, vast cultural amenities, commercial transportation infrastructure, and low cost of living. However, the City and County face significant long-term challenges including their inequitable K-12 education system, the concentration and suburbanization of poverty, limited paths for upward mobility, aging infrastructure, and fragmentation of general and special purpose governments.

Opportunities for economic growth and prosperity include expansion of global connections, cultivation of human capital, emergence of the millennial generation, entrepreneurship and business formation, the existing economic developers network, and available land and buildings.

Section 6: Action Plan

The Action Plan is the culmination of the existing plans, regional profile, and benchmarking and direct input from the CEDS Strategy Committee. Over four working sessions, the Strategy Committee contributed to the refinement of the SWOT analysis, development of the vision and goals, and the identification of specific policies, programs, and investments to support implementation. Some action items are geographically focused by site, neighborhood, or sub-region, while others are more comprehensive, aimed to address regional barriers and opportunities throughout City and County.

In accordance with EDA requirements, the Action Plan first and foremost, “promotes economic development and opportunity” in St. Louis City and County, but also incorporates goals that address public safety, racial and gender equality, transportation access, protection of environmental resources, workforce development, reuse of the built environment, redevelopment opportunities, technology, and alignment with existing plans and resources.

Section 7: Metrics

Performance measures must be established to evaluate the implementation and success of the goals and objectives of the CEDS. Traditionally, economic development metrics have focused on job growth and levels of real estate investment, since these are relatively easy to measure; however, they do not paint a full portrait of performance and success. The performance measures to evaluate the present CEDS aim to show broader ranges of achievement that specifically address the strategy’s vision and goals, including indicators of racial and gender economic equality, transportation infrastructure, entrepreneurship, educational attainment, higher incomes and property values, and increased transit usage. Though ideally performance can be measured quantitatively, there is still much to be learned from documenting qualitative accomplishments such as programs, events, initiatives, and community engagement.

OUR VISION

We will **HARNESS THE CREATIVE CAPACITY** of the St. Louis community to **GROW OUR ECONOMY**, resulting in **SUSTAINED INCREASES** in living standards and **QUALITY OF LIFE** for **ALL OUR RESIDENTS.**

After review of previous plans and reports, analysis of data, evaluation of strengths, weaknesses, opportunities, and threats, and much deliberation, the CEDS Strategy Committee agreed to the above vision for the 2017-2022 Comprehensive Economic Development Strategy for St. Louis County and the City of St. Louis.

From this vision emerged four strategic directions of the CEDS, as shown to the right. Within these strategic directions are 23 goal statements.

STRATEGY 1

Investing in Infrastructure and Real Estate Development

INFRASTRUCTURE

GOAL 1.1 Stimulate investment and reinvestment by supporting catalytic development and redevelopment with major infrastructure improvements and upgrades.

GOAL 1.2 Improve regional connectivity and reduce vehicle miles traveled by expanding multi-modal transportation options and adjusting land use and development incentive policies.

GOAL 1.3 Increase private real estate values, stimulate future investment and redevelopment, and provide multi-modal transportation opportunities through streetscape improvements, road diets, and appropriate street designs.

GOAL 1.4 Promote “smart technology” and innovation to ensure stable energy and information networks for regional economic and job growth.

GOAL 1.5 Increase access to the region’s natural amenities and recreational opportunities by supporting the implementation of the regional greenways and trails system.

GOAL 1.6 Support a variety of additional infrastructure improvements that increase access and safety for pedestrians and vehicles and further reduce barriers to pedestrian and bicycle connectivity.

REAL ESTATE DEVELOPMENT

GOAL 1.7 Leverage the redevelopment potential of land and buildings on and adjacent to Lambert-St. Louis International Airport.

GOAL 1.8 Stimulate sustainable infill development by leveraging existing and future transit nodes and emphasizing the redevelopment of under-performing commercial corridors.

GOAL 1.9 Develop shared regional data and administrative systems to promote real estate development and reinvestment activity.

STRATEGY 2

Supporting Entrepreneurship and Innovation

GOAL 2.1 Leverage existing, or promote creation of new, tax credit programs, lending, and other funding programs that support entrepreneurs and the small business community.

GOAL 2.2 Continue providing resources to nurture high-growth startups and technology firms in the region.

GOAL 2.3 Support talent development, business innovation and new business creation for young professionals.

GOAL 2.4 Expand opportunities for minority- and women-owned businesses.

GOAL 2.5 Continue expanding the St. Louis region as a hub for agriculture and bio-science innovation and technology.

STRATEGY 3

Leveraging Our Assets

GOAL 3.1 Support and/or target business retention and expansion activities.

GOAL 3.2 Improve regional, national, and international connections for business growth.

GOAL 3.3 Improve internal and external perceptions of the region with marketing and outreach programs aimed at attracting and retaining talent and establishing a positive local identity.

STRATEGY 4

Developing Our Workforce

GOAL 4.1 Develop and expand workforce development programs that focus on technical education, especially for individuals living in disadvantaged communities.

GOAL 4.2 Continue investing in multi-modal transportation options, trail systems, higher density housing, and walkable communities as means to attract and retain a mobile workforce.

GOAL 4.3 Develop systems and partnerships that better link educational resources with employment opportunities.

GOAL 4.4 Create talent attraction and retention programs for higher educated and skilled individuals.

GOAL 4.5 Accelerate opportunities for the region's foreign-born populations.

GOAL 4.6 Develop comprehensive STEM and early education resources and curricula to create a prosperous and highly adaptable future workforce.

METHODOLOGY AND PROCESS

Completing the Comprehensive Economic Development Strategy followed a tried-and-true planning process.

1. The St. Louis Economic Development Partnership and the St. Louis Development Corporation selected members of their own staffs and a consulting team to guide and participate in the CEDS process.
2. Research was conducted to identify key issues, challenges, and desired outcomes from socio-economic data sources and from previous plans and reports.
3. A strengths-weaknesses-opportunities-threats (SWOT) analysis was completed as a means to initiate a revised vision for the five-year economic progress of St. Louis County and City as a joint economic “region.”
4. A 25-member Strategy Committee was created to represent workforce, real estate, business, and community interests in the City and County, with an emphasis on the special challenges of north city, inner north county, southeast neighborhoods in the City, and other focus areas needing near-term strategic attention.
5. The Strategy Committee met five times to identify the most important issues that the CEDS should address between 2017 and 2022 and to agree upon a common vision and expected outcomes.
6. The draft CEDS document was released for public review for more than 30 days and received broad perspectives and useful comments that were incorporated into the final report.

Previous Plans: Public Engagement Summary

The St. Louis Comprehensive Economic Development Strategy (CEDS) benefits from a strong foundation of public input collected during recent, non-CEDS planning efforts. Through citizen task forces, scores of public meetings, and working group deliberations, regional stakeholders came together many times over the last five years to consider various facets of economic development. Common themes were evident: a recognition that the St. Louis region is not living up to its potential and needs to act strategically to maintain its position in the regional and global economy; concern regarding growing disparities in wealth made worse by racial and political divisions; and the call for investments in human capital, infrastructure, entrepreneurship, and real estate.

To honor the community feedback from previous plans and studies, and to avoid planning fatigue in the region, the CEDS public outreach process was streamlined. Throughout the planning process, the study team synthesized feedback from previous studies to prepare initial drafts of strategic planning elements for consideration by the CEDS Strategy Committee. In this way, the CEDS recognizes and builds on those previous efforts.

Of the 21 previous studies reviewed as part of the St. Louis CEDS, seven (7) involved direct public engagement.

Table 1 lists these studies along with their study area, engagement activities conducted, target audiences and key input regarding economic development. For the full list of plans, see page 58.

TABLE 1

Name	Study Area	Engagement Activities	Target Audience	Input Regarding Economic Development
Ferguson Commission Report, Forward Through Ferguson (2015)	Regional, emphasis on North St. Louis City and County	<ul style="list-style-type: none"> 17 Commission meetings, 2,000+ attendance 4 work groups held an additional 38 public meetings 	<ul style="list-style-type: none"> Local citizens, area organizations, national thought leaders, institutions, and experts 	The Economic Inequity and Opportunity Work Group, one of four of the Commission's work groups, focused on economic mobility. Resulting calls to action addressed five key areas: expanding Medicaid, employment, financial empowerment, housing, and transportation.
St. Louis County Economic Development Partnership Stakeholder Engagement Forum Findings (2014)	St. Louis City and County	<ul style="list-style-type: none"> Core planning team deliberations Focus groups with target audiences 	<ul style="list-style-type: none"> African American leaders Economic developers Young professionals 	To complement the half-day forum the year prior, target groups identified focus areas, desired outcomes and barriers to success which the planning team used to refine the organization's strategic plan.
Imagining Tomorrow for St. Louis County (2013)	St. Louis County	<ul style="list-style-type: none"> Citizen survey Expert-led policy roundtable discussions (9) Regional "Idea Exchange" public meeting of 100+ regional leaders to review draft plan 	<ul style="list-style-type: none"> St. Louis County residents Regional leaders St. Louis County leadership and staff Technical experts 	<p>According to the County's citizen survey, 85% of residents ranked attracting new companies and retaining large employers as a top County service, second only to emergency response during disasters.</p> <p>With regard to economic development, stakeholders called for revitalization of declining commercial centers, development of an environment of entrepreneurship, and a "cradle to college and career" mentality to help young people position themselves for economic success.</p>
One STL – Many Communities. One Future. (2013)	8-county area of Missouri and Illinois included in the East West Gateway (MPO) Planning Area	<ul style="list-style-type: none"> Regional survey 94 public meetings attended by 2,000+ residents Four standing Committees (Steering, Technical, Public Engagement, Outcomes) 	<ul style="list-style-type: none"> Regional leaders Regional residents Technical experts 	<p>Public engagement found that economy was central to the public's definition of sustainability. People want good jobs and a strong economy that maintains or improves a high quality of life for all residents.</p> <p>The report calls for economic development that equitably benefits the region's citizens.</p>
St. Louis Economic Development Partnership Stakeholder Planning Forum (2013)	St. Louis City and County	<ul style="list-style-type: none"> Half day forum to kick off strategic planning process -large group keypad polling -small group discussions 	<ul style="list-style-type: none"> 100+ leaders of local governments, businesses, economic development organizations and non-profit/social service agencies 	Participants identified strengths, challenges, focus areas, economic development priorities and action items. Six strategies were identified for the new agency: grow/retain jobs and capital investment, support startups and the entrepreneurial community, increase foreign trade and investment, advance redevelopment of strategic real estate assets, accelerate the growth of the region's foreign born population, and align talent with business needs.
St. Louis Sustainability Study (2011)	City of St. Louis	<ul style="list-style-type: none"> City department data gathering and engagement Sustainability Task Force deliberations Community survey of 1,169 respondents (2) Mayor's Sustainability Summits with 800+ participants 	<ul style="list-style-type: none"> General public, City of St. Louis City of St. Louis employees Sustainability practitioners 	Based on input from the public, one of the Plan's seven overarching goals is Prosperity, Opportunity and Employment, which includes a defined set of action steps related to job creation, real estate investment, and investment in human capital.
St. Louis Regional Economic Adjustment Strategic Plan (2011)	Regional focus that included both Missouri and Illinois with special attention to St. Louis County	<ul style="list-style-type: none"> Stakeholder interviews with 100+ individuals to clarify perceptions, issues, and opportunities related to regional economic recovery following the Chrysler plant closing 	<ul style="list-style-type: none"> Civic, public, private and institutional entities 	Priorities expressed through stakeholder interviews included improving workforce development opportunities; nurturing and supporting entrepreneurship; developing strategies to overcome fragmented governance; and investing in infrastructure, transportation and logistics.

Previous Plans: Strategic Alignment

Of the previous plans, the strategic planning effort of the St. Louis Economic Development Partnership in 2013 was particularly relevant. The Partnership was formed in 2013, combining economic development efforts in St. Louis City and County for the first time. To inform the role of the new agency, a very deliberate and thoughtful public involvement process took place involving diverse stakeholders from across the regional economy. The target audience of economic development stakeholders in St. Louis City and County and the goal to identify the most impactful regional economic development strategies closely align with the purpose of the CEDS.

Due to the timing of the CEDS, the Ferguson Commission's report was influential as well. The Commission met for over a year, involved thousands of people and was extensively covered in the media, raising vital awareness about poverty, racial tension and disparities of opportunity in the region.

The highly anticipated Commission report was published in September 2015, shortly before the CEDS Strategy Committee began its deliberations. The report's emphasis on economic mobility echoed sentiments expressed often by stakeholders in earlier planning efforts. The Commission's report, with the added weight of recent events, created a growing desire among regional leaders and citizens for economic development to play a key role in generating more opportunities for more people of color in the region. The CEDS Strategy Committee reflected the heightened sense of urgency around shared prosperity and racial inequities in their conversations on strengths, weaknesses, goals and desired outcomes for the regional economy.

The executive branch of the federal government has initiated several focused efforts to provide targeted government services toward a goal of improving the degree of shared prosperity in the U.S. St. Louis County and the City of St. Louis are both participating in the Promise Zone and the City in the Strong Cities Strong Communities both of which have direct impacts on, and impacts from, the CEDS and its planning process. These programs, therefore, are incorporated by reference into the CEDS.

Promise Zone

Promise Zones are designated by the federal government to address the needs of high poverty communities. They focus on collaboration between local and federal partners over a ten-year period to accomplish several specific goals:

- Create jobs
- Leverage private investment
- Increase economic activity
- Expand educational opportunities
- Reduce violent crime

There are currently 22 Promise Zones across the United States and Puerto Rico. Significant benefits of a Promise Zone designation include preferential access to 13 designated federal agencies, technical assistance from those agencies, support for AmeriCorps/VISTA volunteers, and preference points for selected federal grant programs. Incorporation of the Promise Zone into this CEDS document and analysis is intended to reinforce future partnerships with the federal government in revitalizing the St. Louis area economy.

The St. Louis Promise Zone was designated in April of 2015 and encompasses areas of both the City of St. Louis and St. Louis County. It is the geographically largest Promise Zone in the U.S. with a population of approximately 200,000 and is the only one that encompasses parts of two

county-level jurisdictions. There are 27 municipalities and seven school districts within the St. Louis Promise Zone. A primary impetus for change in socio-economic conditions in the Promise Zone is the “Forward Through Ferguson” strategic plan that addresses circumstances that triggered civil unrest in 2014.

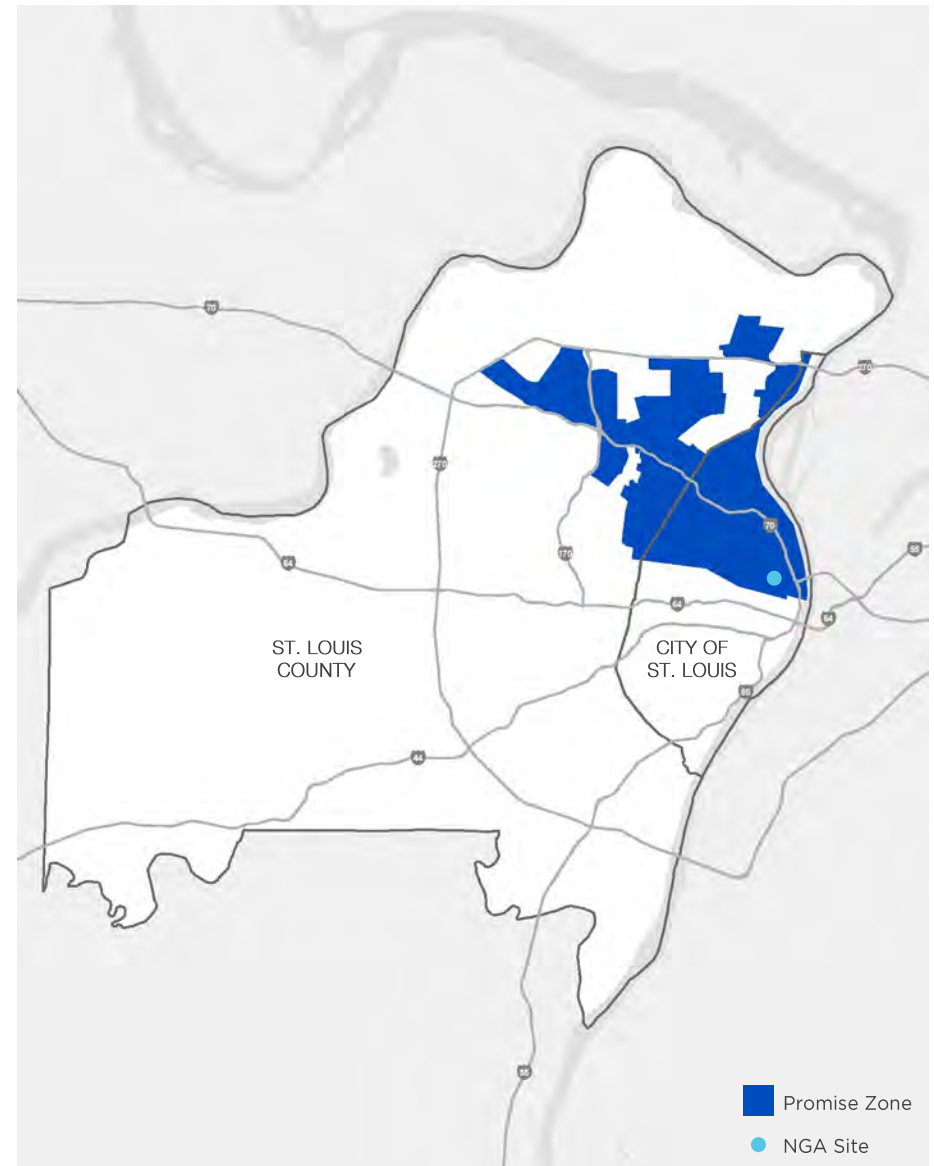

The St. Louis Economic Development Partnership is the oversight agency for the Promise Zone. In alliance with St. Louis City and County governments and the various municipalities, the Partnership is focusing on public-private collaborations to drive area revitalization and to create a better, more inclusive St. Louis region.

National Geospatial-Intelligence Agency

The National Geospatial-Intelligence Agency (NGA) is making a \$1.7 billion investment in a new western U.S. headquarters in the Promise Zone. This is by far the largest single public or private investment that this area has experienced in decades. When completed, the NGA will move 3,100 jobs from its current (and obsolete) facility in south St. Louis City to its new location, which is anticipated to catalyze additional development activity in the surrounding neighborhoods. The NGA environs are presently a target for numerous public investments to support it (roads, transit, utilities) and to attract private investment in housing, employment, and retailing.

Strong Cities, Strong Communities

The Strong Cities, Strong Communities (SC2) initiative, first announced in July 2011, sought to strengthen neighborhoods, towns, cities, and regions around the country by enhancing the capacity of local governments to develop and execute their economic vision and strategies, providing necessary federal agency technical assistance and access to federal agency expertise, and creating new public and private sector partnerships.

SPECIAL GEOGRAPHIC CONSIDERATIONS

The City of St. Louis was designated a SC2 community in 2014 through 2016. By interagency agreement, the SC2 initiative folded into goals executed through the Promise Zone. While the formalities of SC2 have been completed, a lasting result will be better relations with a wide range of supporting federal agencies and many lessons learned that will be applied between 2017 and 2022.

Choice Neighborhoods

The Choice Neighborhoods program of the U.S. Department of Housing and Urban Development supports locally-driven strategies to address struggling neighborhoods with distressed or HUD-assisted housing through comprehensive approaches to neighborhood transformation. The City of St. Louis won a \$29.5 million Choice Neighborhoods grant from HUD in late 2016. The grant money will be combined with local funds to focus on the near north side, particularly in the Carr, Columbus Square, Old North, and St. Louis Place neighborhoods.

Southeast City Neighborhoods

Many of the challenges leading to designation of the St. Louis Promise Zone and the winning of the Choice Neighborhoods grant were triggered by substantial outmigration to county communities and, in particular, to neighborhoods in the southeast quadrant of the city. While population growth and added housing occupancy are healthy outcomes for these neighborhoods, cultural shifts and added demands on public services are straining the southeast side. This CEDS, therefore, emphasizes public and private investments in the neighborhoods with many initiatives to be drawn from approaches within the Promise Zone.

The Entirety of the City and County

Notwithstanding The Promise Zone, SC2, NGA, Choice Neighborhoods, and the southeast side, this CEDS and its Action Plan include initiatives and frameworks for all of the City and County. Strategies, goals, objectives, actions, and metrics are intended to apply in any neighborhood, municipality, and community where needs and opportunities for economic growth emerge. While the City and County will likely receive “extra credit” for federal grants that specifically address the Promise Zone and SC2, the CEDS is designed to be fully inclusive of St. Louis City and St. Louis County.

REGIONAL PROFILE

The St. Louis regional economy is essentially on two divergent paths—some metrics indicate that it is well-diversified and resilient with a highly skilled workforce, higher-than-average income levels, and a burgeoning innovation and entrepreneurship ecosystem.

On the other hand, parts of the region suffer from the effects of segregation, extreme poverty, and income inequality, offering limited opportunities for upward mobility.

Geographic Context

Founded as a French fur trapping colony and strategic frontier outpost, St. Louis and the surrounding bi-state region has been, and continues to be, at the crossroads of trade, exploration, innovation, design, and culture. In 1900, St. Louis City was the fourth largest city in America behind New York, Chicago, and Philadelphia, and was the largest “western” city until the rapid growth of Southern California in the 1920s.

At present, the St. Louis metropolitan area is defined as 15 contiguous counties—seven in Missouri, including the City of St. Louis, and eight in Illinois.¹ At just over 2.8 million residents, St. Louis is the 19th most populated region in the U.S. Until the mid-1960s, the metro area experienced population growth at roughly the same rate as the nation as a whole, but then lost population during the 1970s because of large shifts to southern and southwestern regions. The metro area resumed net growth in 1980, but that growth has occurred at about one-third of the growth rate of the U.S.

St. Louis City and County have a combined population of just over 1.3 million, not quite half of the metropolitan population. They are located in eastern Missouri along the west banks of the Mississippi River just southeast of the Mississippi’s confluence with the Missouri River. Much of the northern and western boundary of St. Louis County is also defined by the Missouri River. The City formally separated itself from the County in 1876, but the two “county-level” jurisdictions often work collaboratively on regional projects.

Understanding the St. Louis region is a tale of two divergent paths. On one hand, median household incomes are higher than the national average and the region has a higher proportion of its residents with bachelors or advanced degrees than the national average. On the other hand, the region overall ranks below the national average in metrics related to poverty and income inequality; while certain portions of the region, especially parts of North St. Louis City and Inner North St. Louis County suffer from severe disinvestment with limited benefit from the region’s relative prosperity.

¹ Missouri counties of St. Louis, St. Charles, Franklin, Jefferson, Warren, Lincoln, and the City of St. Louis. Illinois counties of St. Clair, Madison, Monroe, Bond, Calhoun, Macoupin, Jersey, and Clinton. These were designated the metropolitan area after the 2010 U.S. Census when Washington County, Missouri, was dropped.

Sub-Regions

For the purposes of the CEDS, St. Louis City and County are generally defined by nine unofficial economic sub-regions. These areas are unique in terms of socio-economic characteristics, land use, built environment, and employment concentrations.

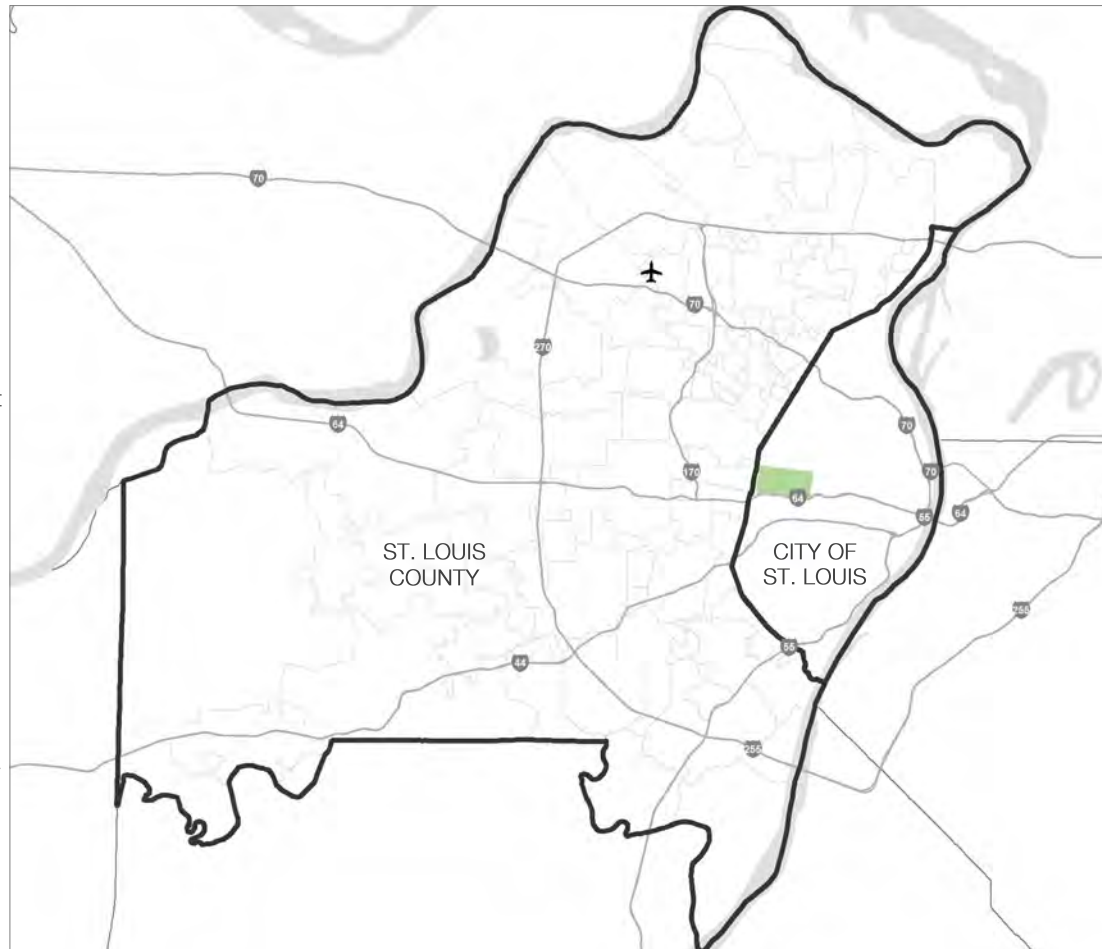

Outer North County: Primarily residential area with a stable population and household incomes generally comparable to the region.

Inner North County: Highest concentrations of poverty in St. Louis County and many of the area municipalities face similar socio-economic challenges as North City.

Downtown Clayton: The region's "second Downtown" located in St. Louis County containing 10.1 million square feet of office space and home to St. Louis County government.

West County: Contains some of the highest concentrations of high-income households in the U.S., especially along the I-64 Corridor, and many of the region's major corporate headquarters along the I-270 beltway.

South County: Includes relatively stable middle-income communities, although some areas are still recovering from major declines in manufacturing employment, most notably from the closing of Daimler-Chrysler's St. Louis Assembly Plant (Fenton, MO) in 2009.

North City: Includes some of the highest concentrations of poverty in the region and continues to suffer from blighted conditions and population loss.

Central Corridor: Contains the highest median household incomes in the City and is home to the region's burgeoning biotech innovation district Cortex, BJC Healthcare (the region's top private employer), and Saint Louis University.

Downtown St. Louis: Primary employment center in the region with 26.8 million square feet of office space. Downtown is also home to some of the region's primary tourism and recreational amenities including the St. Louis Gateway Arch (a national park), Busch Stadium (St. Louis Cardinals), and America's Center Convention Complex (conventions). Additionally, more than 1,800 residential units have entered the market since 2005.

South City: Highest population density in the region and includes a diverse mix of socio-economic characteristics. Significant revitalization has occurred in select neighborhoods over the last decade.

DEMOGRAPHIC PROFILE

Population

With a 2015 population of 2.8 million, the St. Louis MSA is the 19th largest metro area in the United States; however, it is a slow-growing region and continues to be outpaced by other major population centers in the Midwest and throughout the country. From 2000 to 2015, the MSA’s population increased by 3.7 percent, significantly lower than the nation that grew by 13.7 percent. St. Louis City and County contain nearly 47 percent of the region’s population. However, St. Louis City continues to lose population and St. Louis County lost population for the first time in 2010. St. Louis City had a population of over 850,000 in 1950 making it the eighth largest city in the United States at the time. It has lost population every decade since, shrinking to approximately 317,000 people in 2015. St. Louis County absorbed a large proportion of the City’s population through regional shifting, growing from just over 400,000 in 1950 to more than 1,003,000 in 2015. However, the County has not experienced much growth since the 1970s as other parts of the region continue to grow.

Domestic/International Migration

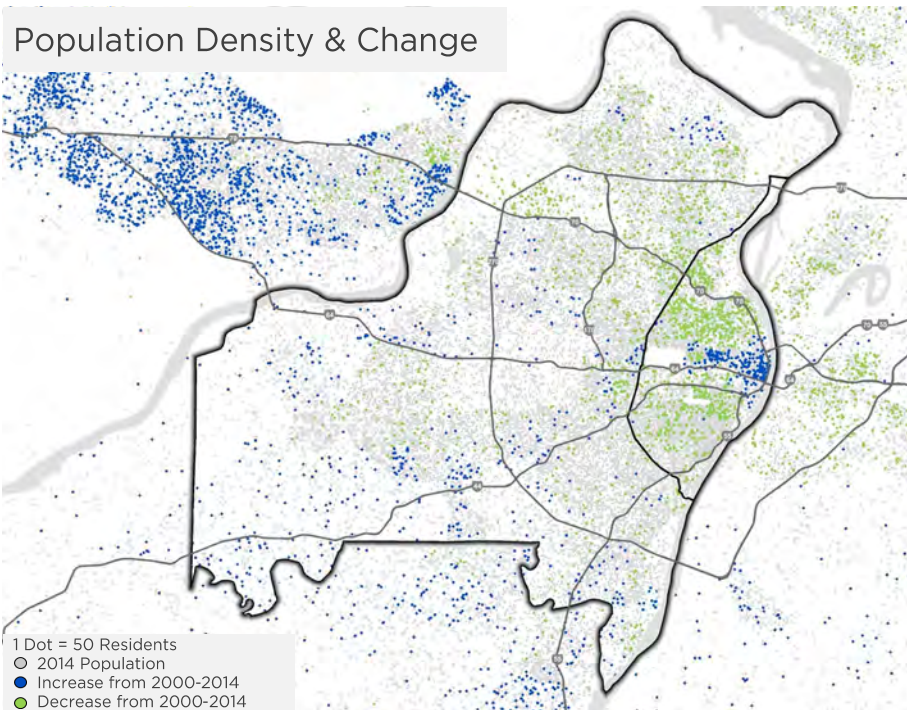

The slow pace of growth in the St. Louis region can be in part attributed to the slow pace of both domestic and international in-migration. Of the largest 52 metro areas in the United States from 2010 to 2014, St. Louis had the sixth lowest increase in net international migration as a percentage of total population (0.41 percent) and had a net loss in domestic migration of 1.4 percent. Given these trends, community leaders launched the St. Louis Mosaic Project in 2012. The American Community Survey (ACS) data shows that for 2015, the St. Louis region had the fastest one-year gain of foreign born population of all the top 20 major metro areas, a nine percent growth rate. This puts the St. Louis region on track to be the fastest growing major metro for foreign born of the top 20 regions for the full 2020 U.S. Census reporting versus 2010, which was the goal established in 2012 for this

Intra-Regional Migration

The spatial patterns in population change within the St. Louis region also demonstrate the challenges that St. Louis City and County face in attracting and supporting new development and sharing economic prosperity. Population change (and development) continues to push into exurban areas in St. Charles County (MO), Jefferson County (MO), and on the Illinois side of the MSA (“Metro East”). There has been positive change in Downtown St. Louis and the City’s Central Corridor, but South City, and especially North City, continue to lose population and face considerable population decline challenges. Though much of St. Louis County has had stable population change over the last decade, many communities in Inner North County, including Ferguson, Dellwood, Wellston, and Pagedale, are losing population.

Municipal Population

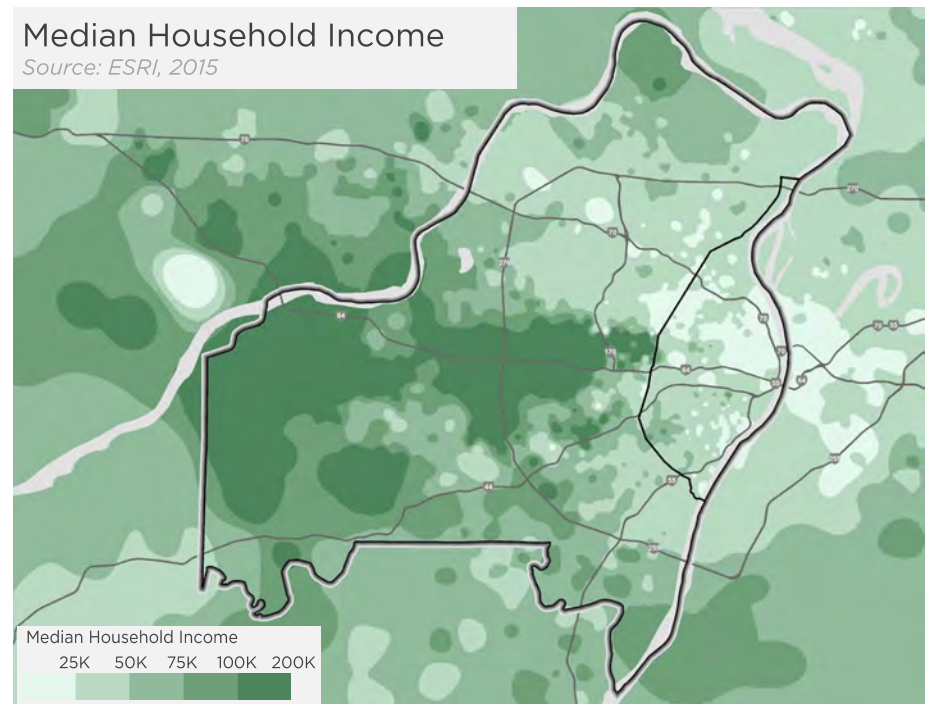

St. Louis County has 90 municipalities and 10 unincorporated Census-Designated Places (CDP), which can present challenges related to regional governance and economies of scale. According to the 2012 Census of Governments from the U.S. Census Bureau, St. Louis County ranked second in the nation in total municipalities per county behind Cook County, Illinois (Chicago). Los Angeles County is third with 88. Of the U.S. counties with populations above one million (35 total), the average population per municipality was 67,000, while the average population per municipality for St. Louis County was around 11,000. In fact, of the 150 largest counties nationwide, only four had an average population per municipality below 12,000. The smallest 45 municipalities (and CDPs) in the County (half of them) total just 55,000 in population.

20 Largest Municipalities and CDP by Population St. Louis County		
Rank	Municipality	2015 Population
1	Florissant	51,887
2	Chesterfield	47,649

20	Clayton	16,104
Portion of St. Louis County		54%

Income

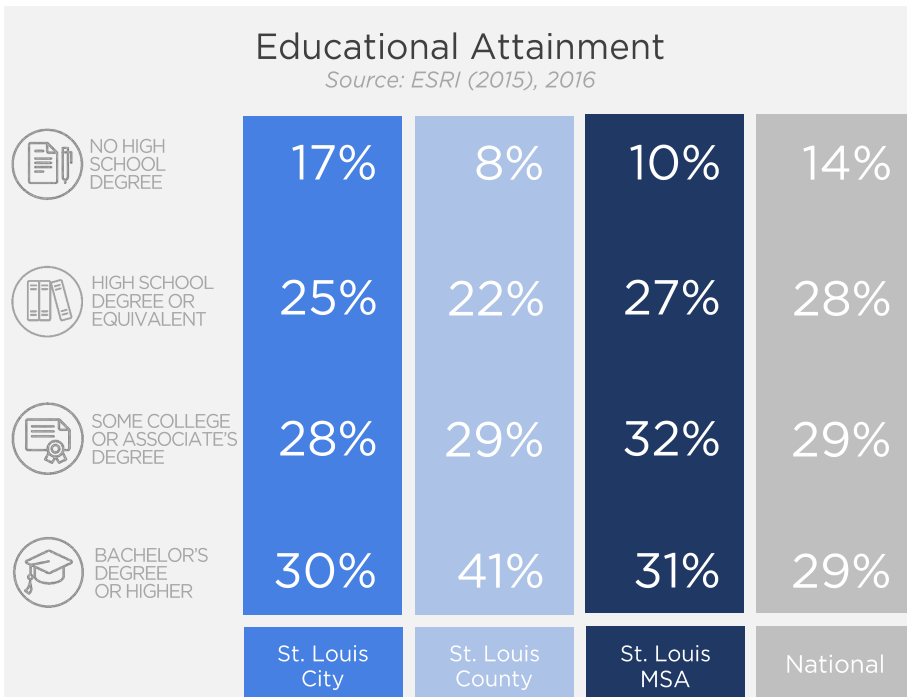

Median household income in St. Louis County (\$58,200) is higher than St. Louis City (\$35,500), St. Louis MSA (\$54,300), and United States (\$53,200); however, many communities throughout St. Louis City and County face considerable disparities in income. On one hand, many households in St. Louis County are quite prosperous—over 27 percent of households earn more than \$100,000 annually, which is higher than the region (23 percent), state (17 percent), and national average (23 percent) for this income group. St. Louis City has a considerably large proportion of low-income households earning less than \$15,000 (24 percent) compared to St. Louis County (10 percent), region (12 percent) and national average (13 percent).

The spatial distribution of median household income in St. Louis City and County gives a good indication of the areas with the greatest socio-economic challenges. Most of the City of St. Louis, especially North City, and areas of Inner North County have considerably lower median household incomes and are areas of concentrated poverty compared to the much more prosperous areas of West County along the Interstate 64 corridor.

Education

Educational levels are intrinsically linked to income potential and, thus, it would be expected that St. Louis County would have a relatively high proportion of households with a bachelor's degree or higher (41 percent) compared to the nation as a whole (29 percent). The County also has a much lower proportion of households without a high school diploma (8 percent) compared to the region and nation. Educational levels in St. Louis City are somewhat divergent since it has a higher proportion of households with bachelor's degrees or higher (30 percent), suggesting its general attractiveness for young professionals. At the same time, given the concentrations of poverty in certain areas of the City, the proportion of households without high school diplomas (17 percent) is significantly higher than the region (10 percent) and nation (14 percent).

Age

Understanding the distribution of age in the St. Louis region demonstrates the need to develop programs and policies to retain and attract young talent. The region has a higher proportion of “Baby Boomers,” or those between the ages of about 50 and 70 in 2016 entering retirement age, compared to the nation as a whole, contrasted with a lower proportion of younger “Millennial” households aged 20 to 29. It is critical that the emerging workforce has the talent and skills necessary to fill anticipated vacancies, but also that the region have a large enough workforce to generate the tax revenues necessary to support an aging population.

Many young professional households have been drawn to St. Louis City given the affordability of housing, attractive historic neighborhoods, access to public transportation, and walkability. The proportion of households aged between 20 and 39 is higher in the City than the County, region, and nation as a whole.

Race

There is more ethnic and racial diversity in the City and County compared to the region as a whole. But, on a neighborhood level, the City and County are racially divided with higher proportions of black households living in low income areas in North City and Inner North County. This divide illustrates the importance of providing policies, programs, and resources to ensure equitable access to economic opportunity. Additionally, the relatively low proportion of households of Hispanic or other ethnic origins compared to national averages further emphasizes the need to create better paths of opportunity for immigrant households.

Source BEA 2016

ECONOMY

Employment Change

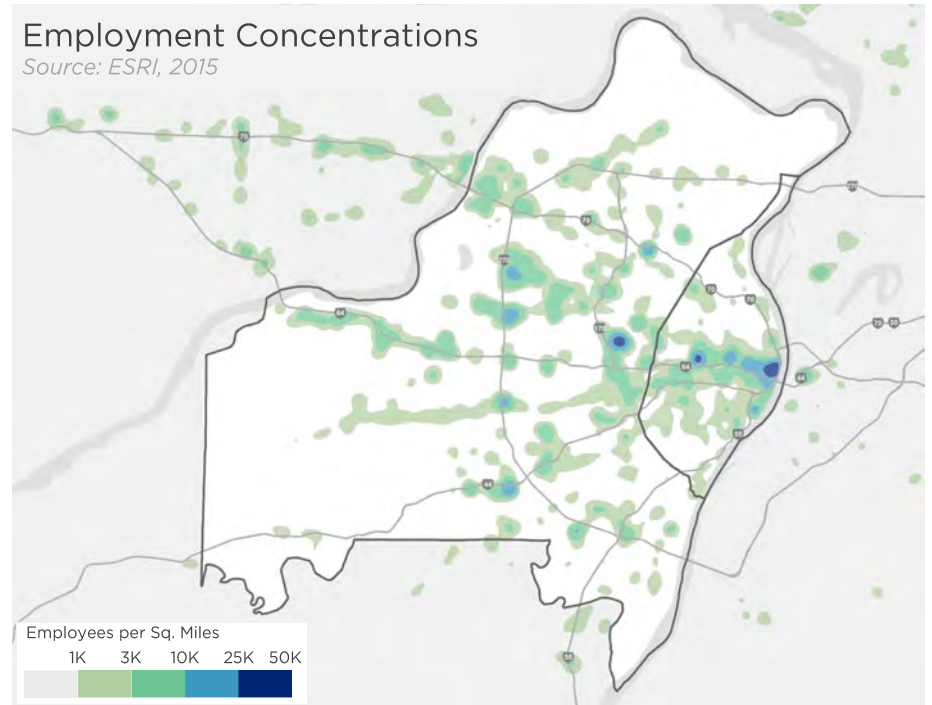

According to the U.S. Bureau of Economic Analysis, St. Louis City and County have over 1.04 million jobs representing 61 percent of total employment in the region; however, there has been a steady decline in employment in the City and County over the last 14 years after peaking at 1.07 million jobs in 2000. Additionally, the overall share of employment in the City and County compared to the rest of the MSA has generally declined annually since 1969, when they encompassed almost 73 percent of total regional employment. Much of this can be attributed to continued suburbanization of development in the region.

Employment Concentrations

Despite losing their overall share of regional employment over the last few decades, St. Louis City and County still have the primary employment centers in the region anchored in Downtown St. Louis, Central Corridor, and Downtown Clayton, all of which have access to the region’s light rail system, Metrolink, and Metrobus. Though office vacancy Downtown is relatively high at just under 15 percent (around four million square feet of available space), Downtown has added over 1,500 residential units and has had an increase in employment by almost 14 percent since 2005.

The primary employment concentration in St. Louis County is downtown Clayton, but there are also substantial concentrations of jobs along the I-270 corridor in the communities of Creve Coeur and Maryland Heights in west and northwest St. Louis County.

Gross Domestic Product (GDP)

In 2015, GDP per capita in the St. Louis region (\$49,300) was lower than the national average for metropolitan areas (\$52,900). Based on the change of GDP per capita, in the early 2000s, the St. Louis region experienced stronger-than-average growth, although national growth was much faster in the years leading up to the Great Recession. Since 2009, growth has been moderate in the St. Louis region, although as of 2015, GDP per capita surpassed pre-recession levels. Regions with higher GDP per capita tend to have more robust export industry sectors like manufacturing and professional services, as well as a larger proportion of the overall population in the labor force.

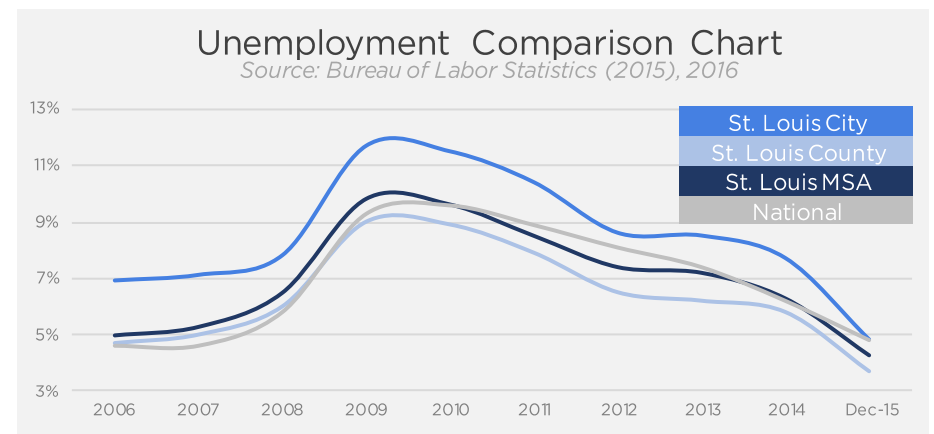

MSA (as of 2015)	GDP per capita
Minneapolis	* \$63,500
Chicago	* \$59,700
Indianapolis	* \$59,500
Milwaukee	* \$58,200
Cleveland	* \$56,000
Columbus	* \$55,000
Kansas City	* \$54,100
United States	\$52,900
Cincinnati	* \$52,600
Detroit	* \$51,400
St. Louis	\$49,300

* Peer city

Unemployment

Unemployment in the St. Louis region has generally followed national trends over the last 10 years although, as of December 2015, the unemployment rate in the St. Louis region (4.3 percent) was noticeably lower than the nation (4.8 percent). St. Louis has a slightly higher unemployment rate than most of its peer Midwestern regions, except for Milwaukee, Detroit, and Chicago.

Historically, St. Louis City has had a higher unemployment rate than the County, MSA, and nation but, as of December 2015, the unemployment rate in the City matched the nation at 4.8 percent for the first time in over 10 years.

MSA (as of Dec. 2015)	Unemployment Rate
Minneapolis	* 3.1
Kansas City	* 3.8
Cleveland	* 3.9
Columbus	* 3.9
Indianapolis	* 4.1
Cincinnati	* 4.3
St. Louis	4.3
Milwaukee	* 4.5
United States	4.8
Detroit	* 5.4
Chicago	* 5.7

* Peer city

Employment Location Quotient

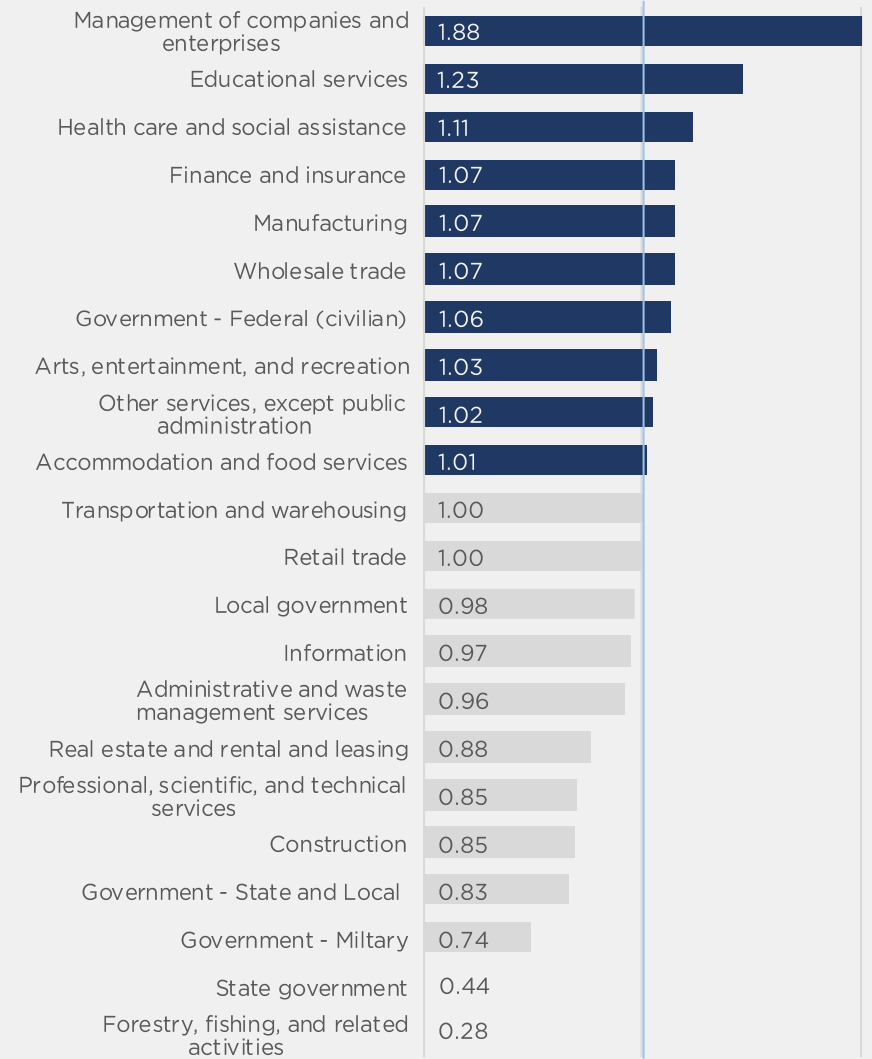

Based on location quotients by industry sector, the St. Louis regional economy is relatively diversified without too much reliance on a single industry sector. The region has an above average number of jobs in the *Management of Companies and Enterprises* sector (location quotient of 1.88) as a result of its strong presence of the corporate headquarters of nine Fortune 500 companies. The St. Louis region also has an above average proportion of jobs in *Educational Services* (1.23) given the concentration of major private universities, including Washington University, St. Louis University, Lindenwood University, and Webster University (employment at public universities such as University of Missouri-St. Louis or University of Southern Illinois-Edwardsville are considered the government sector).

Other key industry sectors include *Health Care and Social Assistance* (1.11) with the presence of BJC Health Care (24,000 employees) and *Financial and Insurance* (1.11), anchored by the headquarters of several major brokerage and financial services firms including Scottrade, Edward Jones, Stifel, and Wells Fargo Advisors.

Given its strategic location along the Mississippi and Missouri Rivers, the St. Louis region has been, and continues to be, a hub for shipping and manufacturing. Despite significant declines in manufacturing employment overall, losing just under 175,000 manufacturing jobs since 1969 (60 percent decrease), the St. Louis region still has a strong manufacturing base and is home to Boeing, GM Wentzville Assembly Center, and Anheuser-Busch InBev, among other major manufacturers and suppliers.

The St. Louis region still remains a strategic distribution and logistics hub as the Port of Metropolitan St. Louis is one of the busiest inland ports in terms of trip-ton miles and total volume (in tonnage) in the United States.

Top Employers

Despite the steady decline in employment in St. Louis City and County over the last decade, they are still home to the region's top employers and institutions. Of the largest 20 employers with headquarters based in the St. Louis region, 19 are located in St. Louis City or County. The region's top private employers are anchored by "Eds and Meds" sectors with major healthcare systems and hospitals including BJC Healthcare (24,100 employees), SSM Health Care (12,700 employees), Mercy Health (12,000

employees) and top research universities, including Washington University in St. Louis (14,200 employees) and St. Louis University (6,800 employees). After merging with McDonnell Douglas in 1997, Boeing Defense, Space & Security is also a major contributor to the regional economy with roughly 15,000 employees. The region also has a relatively strong biotech industry supported by the headquarters of Monsanto (5,192 employees) as well as strong concentrations of investment brokerage firms with Wells Fargo Advisors (5,400 employees) and Edward Jones (5,281 employees).

The Shifting Regional Economy

Like many regions across the Midwest, the St. Louis regional economy was anchored by a strong base in manufacturing until the middle of the 20th Century. Key industry sectors included garment and leather trades, brewing, and machinery manufacturing, specifically automobile and aerospace, with distribution networks that could leverage the region's strategic location in the center of the United States with direct access to the Mississippi and Missouri rivers and rail networks. In fact, the St. Louis region still remains a strategic distribution and logistics hub as the Port of Metropolitan St. Louis is the second largest inland port by trip-ton miles, and the third largest by tonnage in the United States. With evolving economic trends and globalization, however, much like many of its peer cities in the Midwest, St. Louis was hit hard with the national decline in manufacturing. The manufacturing sector employed 25.9 percent of workers in the St. Louis region in 1969, but the share of manufacturing jobs has now dwindled to 6.9 percent of total employment with a net loss of almost 175,000 jobs.

Despite these challenges, the St. Louis region continues to diversify its workforce into a more service-oriented economy. From 2001 to 2014, employment in educational services, finance and insurance, real estate, and health care all increased by more than 28 percent, vastly outpacing job growth across all sectors which averaged less than four percent. Manufacturing employment declined by more than 28 percent during this time period for a net loss of almost 50,000 jobs. This presents a significant need to both attract more talent to the region and provide the proper educational and workforce development resources for existing residents since the fastest growing sectors will require a highly skilled workforce.

Four Key Industry Sectors

As part of its regional economic development strategic plan, the St. Louis Regional Chamber has identified four key industry clusters that are targeted to drive economic growth in the region.

HEALTH SCIENCE AND SERVICES

“The Health Science & Services industry in St. Louis accounts for nearly 200,000 regional jobs and represents a unique convergence of genomics, population health management, and personalized medicine. Fortune 500 companies, globally recognized research institutions, promising life science startups, and several of the nation’s leading healthcare systems and hospitals provide a fertile environment for the continued growth of this increasingly crucial industry.”

The following excerpts are from the St. Louis Regional Chamber’s website: www.stlregionalchamber.com

BIOSCIENCE

“Greater St. Louis has an extraordinary concentration of world-class plant & biomedical scientists, making it a world leader in academic and corporate bioscience research and development. BioSTL, which evolved from the Coalition for Plant and Life Sciences, announced a \$30 million commitment, over five years, from Washington University in St. Louis, BJC HealthCare and the St. Louis Life Sciences Project to forward bioscience company creation and drive economic growth in St. Louis.”

FINANCIAL AND INFORMATION SERVICES

“Greater St. Louis is emerging as one of the nation’s most concentrated locations for Financial and Information Service companies...Here you will find the headquarters for leading investment firms Edward Jones, Scottrade, Stifel and Wells Fargo Advisors. [Other major employers include] Federal Reserve Bank of St. Louis and headquarters operations for CitiMortgage, Reinsurance Group of America, Century Link Technology Solutions (formerly Savvis) and Thomson Reuters; along with the global technology operations for MasterCard.”

MULTIMODAL LOGISTICS & ADVANCED MANUFACTURING

“The St. Louis region is optimally located for 1 and 3+ distribution center models—making St. Louis ideal for companies focused on logistics, transportation and distribution, or heavily reliant on those components...Converging in St. Louis are four interstate highways and six Class-I railroads. St. Louis lies at the confluence of three major rivers – the Mississippi, Missouri and Illinois – with 14 active ports and more than 100 docking facilities extending 70 miles along the Illinois and Missouri banks.” Additionally, the Regional Advanced Manufacturing Partnership, funded through the Office of Economic Adjustment, is now working to leverage defense industry assets and create a new Advanced Manufacturing Ecosystem.

Entrepreneurship

The St. Louis region continues to position itself as a hub for innovation and entrepreneurship. There is strong institutional presence with Washington University, St. Louis University, University of Missouri-St. Louis, BJC Health System, and Missouri Botanical Garden. Local industry clusters in bioscience are strong with support from the Danforth Plant Science Center, Cortex, and BioSTL, as well as the 2016 formation of a global plant science corridor now named “39 North” in reference to the global 39th Parallel that crosses St. Louis and most of the most productive agricultural lands around the world. **Cortex** is a rapidly developing 200-acre mixed-use innovation district in a formerly underutilized industrial area in the City’s Central Corridor that continues to flourish; full build-out is expected to create over one million square feet in facilities and 2,500 jobs. **ArchGrants**, a startup company grant program, has now awarded over \$3 million to 65 startups creating over 270 jobs in the region since 2012. **The City Foundry** mixed-use project will expand Cortex east of Vandeventer with more public focused innovation.

The region has also seen an emergence of nationally-recognized business incubators and co-working spaces devoted to creating positive and stimulating environments for innovation and entrepreneurship. Some of these spaces include **T-Rex**, a co-work space in Downtown St. Louis that houses ArchGrants recipients and other tech-based firms and **Cambridge Innovation Center (CIC)**, an internationally renowned co-working space that recently expanded into St. Louis. The St. Louis Economic Development Partnership under its **STLVentureWorks** operates four incubators in St. Louis County and one in the City in partnership with the St. Louis Development Corporation. In addition to growing companies, STLVentureWorks sets objectives for minority and women business participation. Moreover, SLDC manages a \$10 million loan fund, created by regional investors, to support minority- and women-owned construction contractors.

This growing innovation and entrepreneurship infrastructure is having a significant impact. In 2015, St. Louis had the second most venture capital deals in the Midwest and was third in total investment in the Midwest with \$254 million. A study by Mattermark listed St. Louis as one of the fastest growing startup tech regions in the country in terms of deal flow.

Patents

The St. Louis region continues to grow as a technology and innovation hub with more patents issued in 2013 (850) than the prior 13 years. The total patents issued per 100,000 residents (30) is also at its highest level in the last 13 years. On the other hand, there is still considerable room to grow as the rate of patent issuance per capita is still lower than the U.S. average for metropolitan areas (47 per 100,000 residents in 2013).

Patents Issued per 100,000 Residents (2013)		
Minneapolis	*	99.6
Detroit	*	69.8
Cincinnati	*	48.6
United States		47.4
Kansas City	*	44.6
Cleveland	*	41.8
Milwaukee	*	41.0
Chicago	*	39.5
Indianapolis	*	33.9
St. Louis		30.3
Columbus	*	29.2

* Peer city

Venture Capital

Another measure of entrepreneurial activity is through venture capital funding. St. Louis has positioned itself as one of the top metro areas in the Midwest for venture capital funding. Based on data from the National Venture Capital Association, in 2015, the St. Louis MSA ranked 18th in the country, and 2nd in the Midwest behind Chicago in total deal flow. The total venture capital investment of \$254 million in early stage companies in 2015 was up by over 100 percent from total venture capital investment in 2014.

Venture Capital Investment by MSA, 2015

Startups

However, despite these successful efforts to nurture more technology-oriented firms, the St. Louis region ranks relatively low in startup activity compared to other major metropolitan areas in the United States. According to the 2015 Kauffman Foundation Startup Activity Index, which measures new business creation across all industry sectors from technology companies to restaurants to dry cleaners, St. Louis ranks 38th out of the top 40 largest metro areas, decreasing by three positions from 2014. Research from the Kauffman Foundation has also indicated that thriving immigrant communities also tend to increase levels of entrepreneurship in a region.

Kauffman Foundation Startup Index

Rank 2015	MSA	Index 2015	Rate of New Entrepreneurs	Startup Density	Opportunity Share of New Entrepreneurs

Exports

According to the Brookings Institution, increases in international trade have been attributed to the nation's recovery from the Great Recession with exports accounting for 27 percent of overall economic growth from 2008 to 2014 and a total value of over \$2 trillion. Though manufacturing was once the primary driver of foreign exports, natural resources and commodities have driven foreign export growth since 2008. The St. Louis region's exports as a percentage of GDP have been relatively consistent with national trends since 2003, although it lags behind the average for the Midwest. Exports in the St. Louis region are primarily aircraft products and parts (12.1 percent of total exports) and motor vehicles (10.3 percent of total exports), which are driven by production at Boeing and GM's Wentzville Plant.

Recognizing the need to promote foreign exports in the region, the St. Louis World Trade Center recently developed the Metro St. Louis Export Plan (2016), through the support of the Global Cities Initiative (Brookings/JPMorgan Chase).

Regional economies with a strong base in manufacturing (especially aircraft and motor vehicles) and natural resources (especially petroleum- and gas-related industries and metals) tend to have the largest share of their GDP supported by foreign exports. The top regions include Baton Rouge (oil and gas), Wichita (aircraft), New Orleans (oil and gas), and Ogden (metals). More concerning for the St. Louis region is that the annualized increase in the value of foreign exports only increased by 0.3 percent from 2008 to 2014 ranking 76th in the United States and lower than all of its peer Midwestern regions.

HOUSING

Median Housing Values

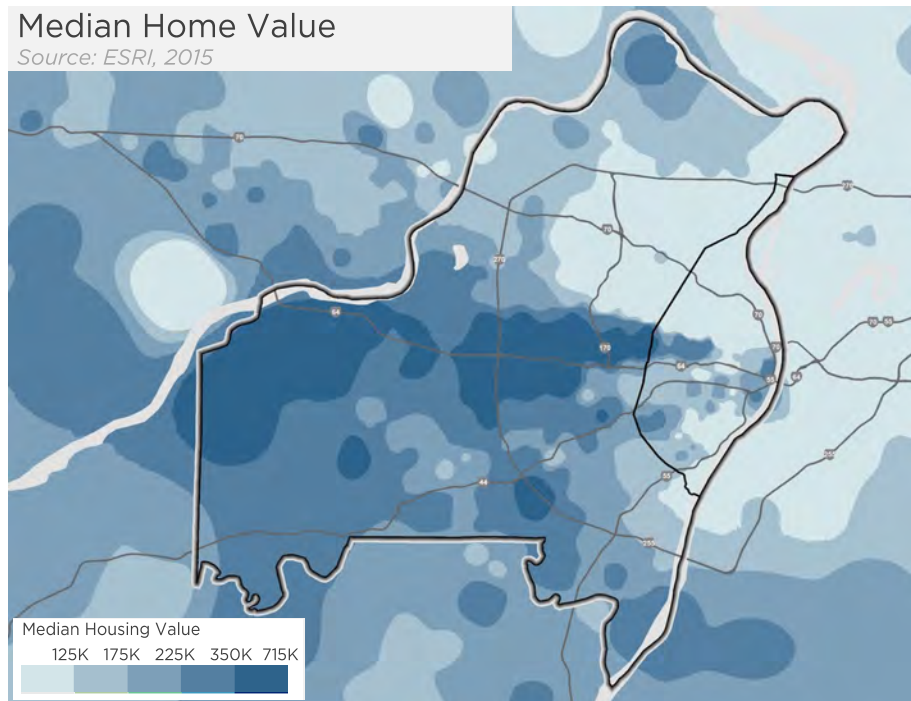

Consistent with median household income, median housing values in St. Louis County are higher than in the City, region, and nation. The spatial distribution of property values, however, shows significant disparities depending on the sub-region. Median housing values along the I-64 corridor in West County are more than \$350,000, while most of Inner North County and North City have housing values well-below \$125,000. Still, as the comparative numbers show below, St. Louis is a highly affordable housing market (at or below national averages) which creates a major opportunity to attract a larger and talented workforce.

\$154,300 St. Louis City	\$187,200 St. Louis MSA	\$206,400 St. Louis County	\$200,000 United States
-----------------------------	----------------------------	-------------------------------	----------------------------

Building Activity

Building activity in the St. Louis region has generally increased since 2011 based on total building permits issued for housing, but the pace of development is still nowhere near pre-recession levels. However, despite declining population in St. Louis City and County, in 2015 (through November), the City and County combined to account for over 30 percent of total permits for housing units in the region. More importantly, the City and County accounted for more than 60 percent of the regional building permits issued for multi-family housing indicating a strong increase in higher-density infill residential building activity.

Given the slow employment and population growth in the St. Louis region, it is lagging behind other comparable metro regions in terms of overall housing starts.

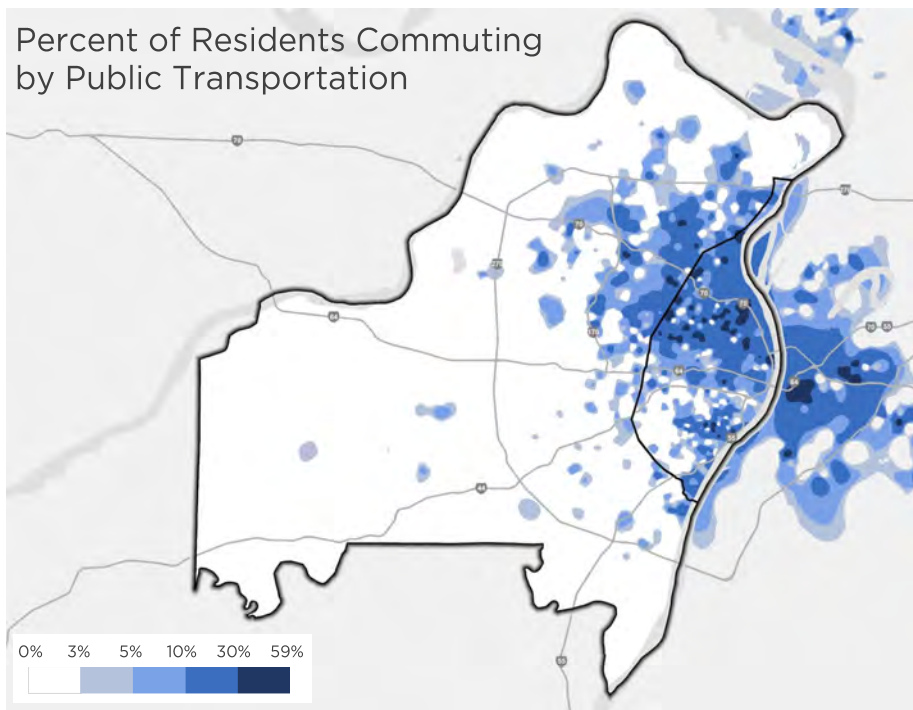

TRANSPORTATION & INFRASTRUCTURE

Commuting Data

More than eight out of ten (83 percent) commuters “drive alone” in the region according to the American Community Survey, which is markedly higher than the national average (76 percent). The use of public transportation, therefore, is relatively low but is significantly higher for St. Louis City residents (10 percent), than the County (two percent), region (two percent), and nation (five percent). Providing efficient public transportation is critical from a social equality and upward mobility perspective—a much higher percentage of North City and Inner North County households commute via public transportation than other parts of the region, a factor attributable to lower socio-economic circumstances of these workers. In light of these findings, more efficient, frequent, reliable, and affordable public transportation is needed throughout the region to move particularly the most distressed workers to jobs regardless of where those jobs are.

Percent of Residents Commuting by Public Transportation

In many ways, the efficiency of the regional arterial networks has been a contributor to continued sprawl and fragmentation of development in the St. Louis region. The St. Louis region is nationally ranked 9th in terms of total vehicle miles traveled per capita, yet 19th in population and labor force size. Moreover, St. Louis ranks only 41st in terms of annual delays per auto commuter. Given the effectiveness of traffic flow, there is less incentive for households to live closer to employment centers or employers, which limits demand for higher-density residential development and more universal public transit.

Public Transportation

Transit service in St. Louis City and County is provided by Metro Transit, governed by Bi-State Development, which includes MetroLink (light rail), MetroBus, and Metro Call-A-Ride. MetroLink presently includes 37 stations across the region providing direct access to the major employment centers in Downtown St. Louis, the central corridor, several universities, Downtown Clayton, and Lambert-St. Louis International Airport.

Based on the latest data from the National Transit Database, transit ridership in the region increased by 16 percent from 2010 to 2013, although total ridership is still below 2009 levels. Total ridership peaked at over 54 million in 1998, while ridership was 47 million in 2013. This decline can be attributed to population losses in St. Louis City during this time period and continued suburban development and population growth in areas with limited public transportation access.

Air Travel

The St. Louis region has five major airports; the two busiest are located in St. Louis City and County: Lambert-St. Louis International Airport and Spirit of St. Louis Airport. The other three, St. Louis Downtown Airport, St. Louis Regional Airport, and MidAmerica St. Louis Airport, are located in Illinois.

Lambert-St. Louis International Airport is the 32nd busiest airport in the U.S. in terms of passenger enplanements (boardings). Since its peak in 2000 with 15.3 million passenger enplanements, the airport has now dropped by almost 140 percent to 6.4 million in 2015. With changes in many airlines' hub and spoke operations, Lambert has lost direct flights to Europe and Asia as well as other prominent destinations around the world. Business leaders in Greater St. Louis are working diligently to reinstate such travel among the airlines. In order to increase visibility for the region, the Airport Commission, St. Louis Mayor and Board of Alderman recently approved a change in the name of the airport to "St. Louis-Lambert International Airport" effective January 2017.

LAMBERT-ST. LOUIS INTERNATIONAL AIRPORT

Freight

St. Louis has the existing infrastructure and strategic geographical assets to maintain and expand its positioning as a major shipping, transportation, and logistics hub. The region is located at the confluence of the nation’s two longest rivers (Missouri and Mississippi) serving the Port of Metropolitan St. Louis, the nation’s second largest inland port by trip-ton miles. The St. Louis region is also at the junction of four interstates (I-44, I-55, I-64, and I-70) and has rail infrastructure supporting six Class I railroads that can utilize intermodal port facilities. Additionally, St. Louis is strategically located within 300 miles of seven other major metropolitan areas, including Chicago, Kansas City, Indianapolis, Memphis, Louisville, Nashville, and Des Moines. In 2012, St. Louis was ranked 11th in the country in total freight tonnage and ranked 16 in total freight value.

The St. Louis Regional Freightway was formed in 2016 as a public-private partnership to optimize how the region coordinates and manages freight traffic by air, rail, road, water, and pipeline and set a framework for planning, marketing, and advocacy of the region as a national freight hub.

GOVERNANCE / KEY ORGANIZATIONS

St. Louis County Stlouisco.com

As the hub of the St. Louis metropolitan area, St. Louis County plays a vital role in the regional economy and provides a significant share of Missouri's statewide employment. As the most populous county in Missouri, and population and economic center of the St. Louis metropolitan area, St. Louis County plays a crucial role in the state's and region's vitality.

City of St. Louis Stlouis-mo.gov

The City of St. Louis harnesses the strength and spirit of its diverse community to create an economically, socially and ecologically vibrant City for present and future generations; one that dynamically serves those who live, work, and play in the City's rich and celebrated historic landscape.

St. Louis Economic Development Partnership Stlpartnership.com

The Partnership provides a broader range of services than most agencies of its kind, boosting innovation and entrepreneurship, attracting and retaining companies, increasing the region's international reach, and revitalizing municipalities. It is a key facilitator of regional growth for businesses and communities throughout the St. Louis Metropolitan area and is grantee of EDA's Revolving Loan Fund.

St. Louis Development Corporation Stlouis-mo.gov/sldc

SLDC is an umbrella, not-for-profit corporation with the mission of fostering economic development and growth in the City of St. Louis by stimulating the market for private investment in City real estate and business development and improve the quality of life for everyone who lives in, works in, and visits the City. SLDC is also a grantee of EDA's Revolving Loan Fund.

St. Louis Regional Chamber Stregionalchamber.com

The chamber convenes leaders throughout the bi-state region to get big things done, develops and champions public policy to enhance the region's business climate and livability, and works in specific economic sectors to help companies startup, expand, or move to St. Louis.

East-West Council of Governments Ewgateway.org

East-West Gateway is the metropolitan planning organization for the area. The federal government and states have vested legal authority in the agency for developing and adopting plans for the region's surface transportation system. East-West Gateway provides a forum for local governments to work together and solve problems.

Downtown STL Downtownstl.org

Downtown STL is the catalyst for creating and promoting a Downtown that attracts investment, economic activity and vibrancy at the hub of the region. Downtown STL also manages the Downtown St. Louis Community Improvement District that provides enhanced services to make Downtown St. Louis a cleaner, safer and more inviting place.

Bi-State Development Bistatedev.org

Bi-State Development is an interstate compact agency existing pursuant to an agreement between the states of Missouri and Illinois and created by an act of the United States Congress. Its business operations include the Gateway Arch Riverfront, Metro Transit, St. Louis Downtown Airport, Regional Freight District, and Bi-State Development Research Institute.

Greater St. Louis Economic Development Network Stregionalchamber.com/who-we-are/regional-partners

The Network is a collaborative group of over 100 economic developers with success in regional economic development tied directly to its ability to work collaboratively throughout the region with many City and County partners, coming together as The Regional Economic Development Network.

Lambert-St. Louis International Airport
Flystl.com

Lambert-St. Louis International Airport is vital to the region’s economic health, connects St. Louis to the rest of the world, and contributes to quality of life. More than 12 million people travel through Lambert-St. Louis annually and it generates \$3.6 billion in economic impact, making Lambert-St. Louis one of the area’s greatest assets.

St. Louis Community College
Stlcc.edu

St. Louis Community College is the largest community college district in Missouri and one of the largest in the United States. St. Louis Community College recognizes the dignity and worth of all human beings and believes that postsecondary education should be available to all who can benefit from it.

St. Louis County Municipal League of Metro St. Louis
Stlmuni.org

With nearly 100 years in service promoting stronger local government, the League is the official advocacy organization for municipalities in metro St. Louis. The League fosters collaborations with municipal officials, other government organizations and business leaders to link communities and strengthen local government for the benefit of the region.

World Trade Center St. Louis
Worldtradecenter-stl.com

World Trade Center St. Louis (WTC) is a membership organization formed in 1993 to promote international trade and business in the St. Louis region as well as most of Missouri and Southern Illinois. WTC is certified by the World Trade Centers Association (WTCA) and provides trade education, international market research, networking, and other businesses services.

St. Louis County Office of Strategy & Innovation
Stlouisco.com

The Office of Strategy and Innovation focuses on achieving St. Louis County’s long-range vision, identifying and executing strategic priorities, and measuring community impact.

Beyond Housing
Beyondhousing.org

Beyond Housing is a comprehensive community development organization convening partners and providing leadership. From purchasing a home to health, education, jobs, and economic development, it offers holistic resources and support. By using the school district boundaries, it aligns resources and partners around a specific area of help.

RISE
RiseStl.org

Rise is a leading nonprofit organization that connects key groups, working to revitalize communities and neighborhoods in Greater St. Louis. Rise acts as a resource and partner to the community, bringing together non-profit organizations, financial institutions and government to make successful neighborhood revitalization possible.

St. Louis Agency on Training and Employment
Stlouis-mo.gov/government/departments/slate

SLATE is dedicated to employment and job training services for job seekers with barriers to employment and support for businesses looking to hire a diverse workforce. SLATE Missouri Career Center (SLATE MCC) provides training and job placement services to the St. Louis City’s adult workforce.

North County Incorporated
Northstlouiscounty.com

North County Incorporated is a regional development organization, which acts as a catalyst to define and advocate economic and community development for North St. Louis County. North County Incorporated was founded in 1977 and represents the 47 municipalities and unincorporated area in North St. Louis County.

St. Louis City Office of Planning & Urban Design
Stlouis-mo.gov/government/departments/planning

The Planning and Urban Design Agency focuses on planning for the future of the City of St. Louis through effective measures of planning, design review, construction plan approval, code compliance, and housing assistance.

SECTION 2

DISTRESSED PROPERTIES PROBLEMS AND SOLUTIONS

Roughly a quarter of the parcels in St. Louis City and around eight percent of parcels in St. Louis County are considered distressed. These parcels are largely located in North St. Louis City and Inner North County. Though these parcels can be viewed as barriers to growth, with the proper funding, programs, and coordination, they also provide a tremendous opportunity for new development.

Overview

Based on available information from St. Louis City and St. Louis County, the accompanying “Summary” table provides an approximation of the number of land parcels and associated acreage that are vacant, contain vacant buildings, are in foreclosure, or are tax delinquent. Collectively, these parcels are considered “distressed” because they are not contributing to the economy and tax bases of the City and County as much as they could.²

Roughly a quarter (23.5 percent) of the parcels in the City of St. Louis and 12.6 percent of the City’s acreage are classified as distressed property. For St. Louis County, 8.3 percent of parcels and 9.7 percent of the acreage of the readily developable land are considered distressed.³

It is important to note that the parcels and acreage are for the entirety of St. Louis City and County. However, the distressed properties are largely located in North St. Louis City and County, with a particular concentration in the designated Promise Zone. In many ways, this concentration reflects many unstable economic conditions and race-related policies and actions. At the same time, many parts of the City and County, most notably the southeast neighborhoods of the City, have stronger economic forces but highly challenging real estate markets and obvious disinvestment. Policies to address distressed properties, therefore, cannot afford to allow these relatively marginal conditions to worsen.

While the significant amount of real estate is distressed, it also represents a very important economic opportunity, assuming a series of issues can be addressed.

² That said, the present inventory, as presented on the summary table, appears to be incomplete and/or inaccurate to a sufficient degree that warrants continued research and documentation by relevant planning agencies. That is, the inventory of distressed properties, and policy implications that derive therefrom, would benefit by immediate field verification as well as routine (at least annually) updates and subsequent reports to the public.

³ Excludes floodplain land and land in the steep Ozark Plateau of west St. Louis County.

Update and Verification of Conditions

While the information available from St. Louis City and County provides a picture of the general quantity and location of distressed properties, it is in need of updating and verification as well as a classification for properties in near-distressed circumstances. In particular, field verification of current vacancy, and especially the condition of vacant buildings, is needed to facilitate the planning and reuse of distressed properties. The City of St. Louis engaged a site inspection consultant to evaluate at least some of its vacant properties in early 2016, but an expanded effort to include all City properties, particularly commercial properties that are not tracked, is even more desirable.

St. Louis County, with nearly 400,000 parcels of land in unincorporated areas and 90 municipalities, currently has no single method for documenting vacant and distressed properties. However, a variety of data is collected, including tax delinquent properties, nuisance properties (in unincorporated areas), and vacancies using U.S. Postal address data to track countywide trends and concentrations. Some municipalities maintain their own inventories, including those that require vacant properties to be registered. A more comprehensive system to identify and collect information about distressed properties in St. Louis County would be beneficial.

An important focus of the distressed properties field inspection for both the City and County would be to identify vacant and under-occupied structures that could be rehabilitated and structures that are deemed too deteriorated that could be demolished to make way for future redevelopment. In addition, it would be useful to identify distressed properties with potential environmental problems. That said, St. Louis County recently produced a map illustrating all the brownfield development sites in the Promise Zone on behalf of the St. Louis Economic Development Partnership. While the National Priorities List and the Missouri Hazardous Substance Site Locator provide lists of known environmental problems, they are typically limited to the worst cases. Research on the remaining properties, to identify previous uses that could contribute to the need for environmental cleanup, or vacant properties where all materials from demolition were not removed from the sites, would be useful in determining the future redevelopment potential of the properties.

Property Consolidation and Preparation for Reuse

While the acreage of distressed properties is substantial, much of the portfolio is made up of small properties that are not contiguous or are privately owned. Therefore, it would be useful to identify locations where acquisition of additional property, when added to publically owned property, could create viable redevelopment opportunities. Once these redevelopment opportunities are determined and prioritized, a source for funding desired acquisition needs to be established.

A second component of preparing properties for reuse would involve the demolition of vacant buildings and the elimination of environmental problems. The City of St. Louis has a program for demolishing dilapidated buildings but funding to address all the needed demolition is inadequate. St. Louis County likewise has limited funding for demolitions. Therefore, additional funding is needed to prepare property for redevelopment.

Coordination with Other Planning and Development Efforts

When combined with other programs in St. Louis City and County, the portfolio of vacant and distressed properties can provide an important resource for the implementation of these programs or can take advantage of the planning efforts to enhance the development opportunities presented by vacant and distressed properties. A major opportunity would involve the federally mandated \$4.7 billion Metropolitan St. Louis Sewer District (MSD) Project Clear, which is intended to improve water quality and alleviate many wastewater concerns created by storm water runoff and combined sewers. MSD is looking at vacant land as a way of capturing and reducing runoff problems. As part of this effort, the City and County would like to have MSD look at creating open space as an amenity that could help catalyze development, in addition to simply looking for an engineering solution. One way to foster a coordinated approach would be to create a demonstration project that could help the understanding of how such an approach could be utilized on a broader scale.

In addition to turning vacant and distressed property into open space, MSD's Project Clear Rainscape Program can leverage public/private partnerships to support and fund redevelopment in the Mississippi River combined sewer area. MSD can fund up to 100 percent of Green Infrastructure practices on sustainable developments that capture and reduce stormwater runoff. Green Infrastructure can become an amenity in redevelopment, and therefore, incentivize and add value to a development. MSD will be spending up to \$5 million annually on this effort for many years.

Vacant and distressed property can also play an important role in contributing to and leveraging a number of ongoing planning and development efforts, including:

- Numerous development efforts in north City and County – the Federal Promise Zone, Strong Cities Strong Communities (SC2), the location of the National Geospatial-Intelligence Agency (NGA) West, the NorthSide Regeneration Redevelopment Area, the North Riverfront Open Space & Redevelopment Plan, the North Riverfront Commerce Corridor Plan, Choice Neighborhoods, EcoDistrict 2015, the 24:1 Community Initiative Plan, and the Ferguson Commission report.
- Southeast neighborhoods in the City undergoing early stages of disinvestment stress as population shifts within the City continue.
- Transit-oriented development around MetroLink stations.
- Implementation of the Great Rivers Greenways regional master plan.
- Implementation of the St. Louis Regional Freight District plan.

Highest and Best Use Analysis

The vacant and distressed land can potentially be used for a variety of purposes. However, not all uses will be of equal benefit for the economic development of St. Louis City and County. Before the sale of publicly owned land or public acquisition of privately owned land to create viable development sites, an analysis of the highest and best uses of the properties should be undertaken to provide a framework for a disposition strategy and a guide for the potential partnering with viable private sector development or other public sector joint development programs, such as those mentioned above.

SECTION 3

DISASTER AND RESILIENCY

In the St. Louis region, disaster recovery is typically associated with flooding or tornado damage, but the region must also be prepared for a number of potential man-made disasters, including the failure of aging and potentially hazardous infrastructure or responding to economic shocks such as major layoffs or recession. Fortunately, a number of steps have been taken to ensure the region is well-prepared for the unexpected.

Disaster and Economic Recovery and Resiliency Assessment and Planning

The St. Louis region has its share of vulnerabilities to disasters, both natural and man-made. The region’s location at the confluence of two major rivers and proximity to the New Madrid Seismic Zone and the Central Plains region bring heightened risks of flooding, earthquakes, and tornadoes. Shifting climate patterns have increased average temperatures and led to more days of extreme heat. Aging infrastructure and hazardous waste sites introduce the danger of accidents with far-reaching consequences. And the intricacies of our modern economy and political system make the possibility of losing a major employer or experiencing a period of civil unrest ever-present.

In the face of these vulnerabilities, the St. Louis region has demonstrated a strong commitment to collaboration and coordination in mitigating the risk of, preparing for, and responding to potential incidents. Regional plans and programs have been put in place to bring together disparate systems and educate both leaders and the public on how to be prepared and resilient. The St. Louis Economic Development Partnership (SLEDP) has an important role to play in supporting and implementing these plans and programs, in order to keep the region’s businesses and workforce safe, strong, and prepared to recover from any and all of these threats.

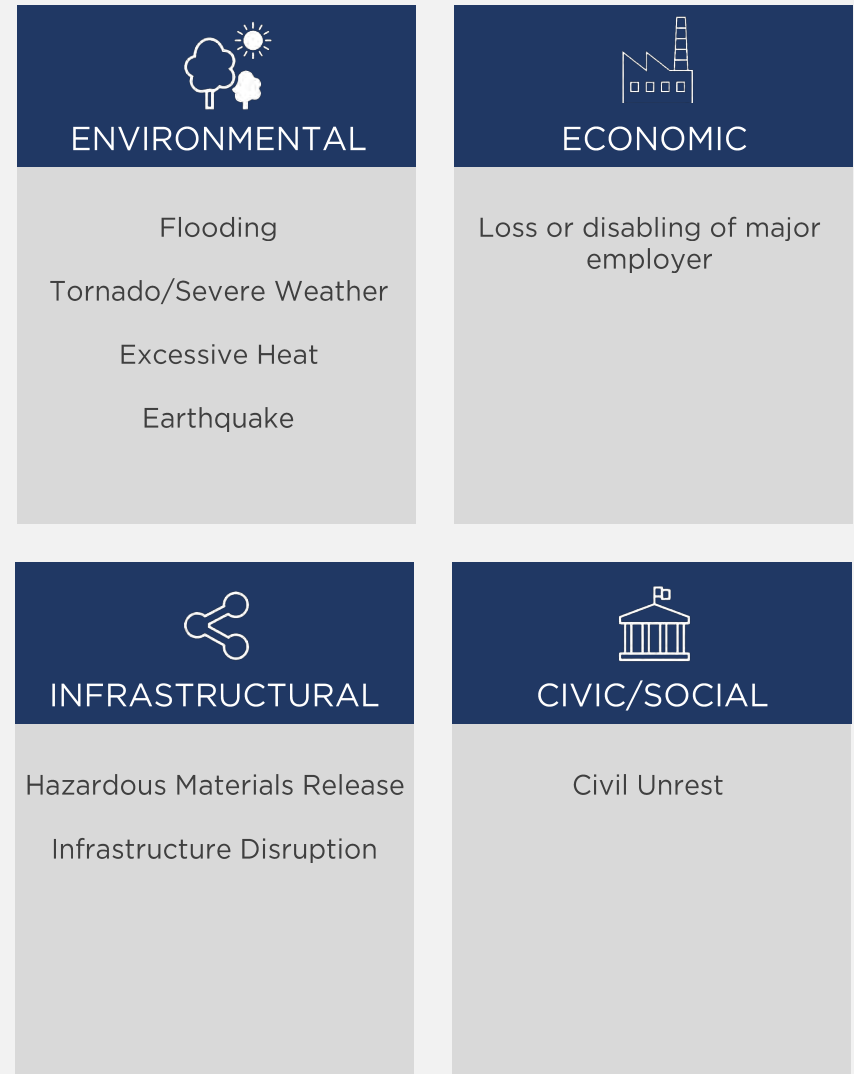

In describing the concept of economic resilience, the US Economic Development Administration writes,

“In building economic resilience, it is critical that economic development organizations consider their role in the pre- and post-incident environment to include steady-state and responsive initiatives. Steady-state initiatives tend to be long-term efforts that seek to bolster the community or region’s ability to withstand or avoid a shock. Responsive initiatives can include establishing capabilities for the economic development organization to be responsive to the region’s recovery needs following an incident.”

Building resiliency should therefore be approached through a combination of initiatives that respond to incidents and those that prevent or bolster communities against such incidents.

Major Vulnerabilities

Sources: St. Louis Regional Hazard Mitigation Plan Update for 2015-20 (EWG); St. Louis Metropolitan Area Risk Assessment, August 2009 (STARRS)

Hazard Mitigation

The 2015-2020 St. Louis Regional All Hazard Mitigation Plan⁴ was developed by the East-West Gateway Council of Governments on behalf of the City of St. Louis and St. Louis, Franklin, Jefferson, and St. Charles counties. As described by East-West Gateway, the plan “is designed to help protect public safety and prevent loss of life or injury in the event of a natural disaster. It is also designed to reduce risk to existing and future development and to prevent damage to each community’s unique economic, cultural and environmental assets.”

The Plan includes strategies for increasing public information and awareness for mitigating natural disasters, general hazard mitigation, and specific mitigation of the highest risk natural disasters. These action items can be found in Chapter Four of the Plan. Among the strategies are actions that increase the resiliency of communities and the built environment, including:

- Joint purchases of supplies and equipment across municipalities;
- Protection of stream buffers from development;
- Use of floodplain best management practices;
- Stormwater management through the use of green infrastructure;
- Use of buy out programs for properties in frequently flooded areas;
- Updating building codes; and,
- Improving the structural integrity of dams.

The SLEDP’s action plan addresses a number of these strategies, particularly in encouraging maintenance of existing infrastructure, infill development, and the Clean and Green green infrastructure program.

⁴ 2015-2020 St. Louis Regional All Hazard Mitigation Plan can be found at http://www.ewgateway.org/ProgProj/Emergency_Response/HazMit/hazmit.htm

Emergency Response and Recovery

The St. Louis Area Regional Response System (STARRS) is a consortium of regional organizations that work together to coordinate and collaborate on regional responses to “large-scale critical incidences.” The organization is responsible for putting together strategy and coordination plans for responding to a variety of potential threats that can have impacts across jurisdictional boundaries, and for managing preparedness grants from the Department of Homeland Security and Department of Health and Human Services. Through a Memorandum of Understanding with East-West Gateway Council of Governments, STARRS cooperates with the region’s eight county governments that make up the East-West Gateway region. Each of the counties is represented on the Council’s Board of Directors. The Council also coordinates with the other agencies involved in emergency response and recovery, including the region’s Community Organizations Active in Disaster (COAD), Local Emergency Planning Committees (LEPC), and Community Emergency Response Teams (CERT).

Among its many functions, STARRS has developed the region’s Threat and Hazard Identification and Risk Assessment (THIRA) and Regional Emergency Resource Coordination Plan. The agency was also responsible for designing and installing the St. Louis Regional Digital Microwave System, which allows emergency responder agencies from all parts of the region to communicate across different radio systems. Along with other plans and initiatives, these plans have and will continue to assist in planning for, responding to, and mitigating the highest risk threats to the region.

Moreover, St. Louis County voters approved an Emergency Communication Sales Tax in 2009 which led to the rebuilding of the County’s siren system and implementation of an interoperable countywide wireless radio communication network.⁵

⁵ More information on STARRS and its functions can be found at <http://www.stl-starrs.org>.

CASE STUDY

SLEDP

St. Louis Public Radio

SLEDP played a leadership role in the formation of the Small Business Relief Program in the wake of civil unrest in Ferguson in August 2014. The Program was an initiative of the Recovery St. Louis Coalition, which included the St. Louis Regional Chamber, a number of state agencies, a coalition of banks, workforce development partners, and business and civic leaders from the cities of Jennings, Ferguson, Dellwood, and throughout the region. The small business relief program provided grants and zero-interest loans to businesses along West Florissant that suffered damage and loss of inventory during the summer protests. The community put together a \$1 million loan fund that over 80 businesses took advantage of over the course of a year, helping to sustain the small business vitality of one of the region's major commercial corridors.

CASE STUDY

United Way

United Way

In December 2015, devastating floods reached twenty-year high levels along the Mississippi and Meramec Rivers, killing more than 20 people, displacing thousands more, and damaging hundreds of businesses. The SLEDP provided a conduit through which St. Louis County was able to provide \$500,000 in interest-free loans to businesses affected by the floods, helping them to rebuild and stay open in their communities.

Preparedness

The *OneSTL Plan* identifies seven major indicators of preparedness that can be used to measure the region’s ability to respond to disasters and crises:

- Flood Resilience
- Floodplain Management
- Heat/Cold Mortality
- Hazard Mitigation; Development in Potentially Hazardous Areas
- Addressing Climate Change
- StormReady

Descriptions and measures of these indicators can be found on the OneSTL site at www.onestl.org/indicators/prepared. SLEDP will continue to support efforts to improve all of these indicators, particularly in reducing development in potentially hazardous areas such as flood zones, landslide areas, and earthquake liquefaction areas, which has a particularly direct impact on economic development and resiliency.

Resilience

The City of St. Louis was named one of the 100 Resilient Cities by the Rockefeller Foundation in 2014—one of only 15 cities in in the United States to receive this designation. As part of this designation, the City received funding to support a Chief Resilience Officer position for two years (the position was filled in 2016) and develop a Resilience Plan guided by Rockefeller’s definition of urban resiliency: “the capacity of individuals, communities, institutions, businesses, and systems within a city to survive, adapt, and grow no matter what kinds of chronic stresses and acute shocks they experience.”

As part of its application, the City identified four primary regional shocks (discrete incidents of disaster) and stresses (long-term conditions of vulnerability) to be addressed as part of the Plan:

Shocks	Stresses
Riot / Civil Unrest	Endemic Violence
Heat Wave	Educational Disparities
Tornado	Declining Population
Flooding	Aging Infrastructure

While the core City is the direct recipient of the grant, the Resilience Plan will identify strategies for building resilience across jurisdictional borders. Indeed, the core principle guiding the Plan is finding ways to address regional issues in an integrated way across systemic and political boundaries. Efforts by the SLEDP to address these shocks and stresses will be an integral part of the resilience strategies formulated in this process, and the success of the Plan will be dependent on the cooperation of SLEDP in incorporating its strategies into future development projects.

Stewardship

The SLEDP will continue to support and work within the existing regional framework addressing disaster preparedness and recovery, as well as be a partner in future initiatives such as the City's Resilience Plan. Additionally, economic development projects will be guided by principles of regional resiliency, including collaboration and cooperation, diversification, flexibility, and inclusiveness.

SECTION 4

TRANSIT-ORIENTED DEVELOPMENT POTENTIALS

Unlike many of its peer regions, St. Louis has a dedicated light rail system connecting residents to primary employment centers, academic institutions, recreational amenities, tourist attractions, and transportation hubs. This existing infrastructure presents tremendous opportunities for transit-oriented development (TOD) and expansion into underserved markets, which are summarized in the *St. Louis TOD Framework Master Plan (2013)*.

The following background and insights are primarily drawn from the July 2013 *St. Louis TOD Framework Master Plan* prepared by the consulting firm Design Workshop.⁶ That plan is one of many development plans and related studies conducted under the aegis of what came to be known as *OneSTL*, the region’s sustainability plan, sponsored by East-West Gateway Council of Governments. Authors of this CEDS have lightly edited the observations and conclusions contained in the TOD Framework Plan in order to reflect more current circumstances and to eliminate unnecessary information in this particular context.

The 2013 TOD Framework Master Plan

St. Louis remains perhaps the smallest and most economically challenged metropolitan area in the Midwest (and perhaps nationally) with a relatively comprehensive light rail system. MetroLink connects some of the greatest economic generators in the region—Lambert-St. Louis International Airport, Washington University, University of Missouri-St. Louis, Barnes-Jewish-Children’s Medical Center, Downtown St. Louis, and Downtown Clayton, to name a few—as well as some of the region’s biggest attractions—the Gateway Arch, Delmar Loop, Forest Park, and Busch Stadium). With this significant transportation resource already in place, the St. Louis region has a tremendous opportunity to leverage the MetroLink system and use transit oriented development (TOD) to bolster the region’s economic position, to fortify and revitalize urban neighborhoods as well as inner-ring suburbs, and to reduce pressure on the region’s freeways and roads.

The potential to create successful developments around MetroLink stations is significant. St. Louis City has already seized on trends among younger generations and empty nesters in favor of living in walkable urban environments with amenities to help stabilize its population and produce notable examples of urban revitalization. Revitalized districts such as

Washington Avenue, Midtown, the Central West End, and Delmar Loop have attracted younger professionals in their 20s as well as older adults (many retired or nearing retirement) who have sought out urban living to take advantage of the area’s outstanding cultural resources. This level of revitalization represents the beginning of a trend that should continue for many years. Neighborhoods in St. Louis City near MetroLink, in particular, should continue to enjoy this trend toward living, working, and playing in urban environments over the next few decades.

Outside of St. Louis City, the location and access of the majority of MetroLink stations provides notable opportunities to create successful and well-planned TOD over the next few decades. Access to universities and colleges, adjacency or access to nearby downtown districts in smaller communities, the presence of significant areas of land proximate to MetroLink suitable for development, and the overall central location of most MetroLink stations translate into viable development potential for real TOD across the system.

Implementation and completion of TOD across the MetroLink system will require leadership, continued resources, investment from the public and private sectors, and continued patience. The *TOD Framework Master Plan* outlines the principles and actions needed to bring successful TOD to reality in the region. The document begins by defining a vision for transit oriented development that aligns with the economic and political realities of the St. Louis region. TOD will likely not emerge in the same form in St. Louis as it has in Portland, San Francisco, Dallas, or other larger cities. The needs and desires of the individual communities along the MetroLink system must inform the character and design of development at each of the station areas. Nevertheless, a common set of principles, based upon research and experience locally and nationally, must guide transit oriented development.

The *Framework Plan* explores the various principles that should guide TOD system-wide, but the region’s leaders must importantly understand and follow a few key principles in particular. While the regulations and guidelines of many

⁶ Other consultants contributing to the Framework Plan were Nelson\Nygaard, BAE Urban Economics, and Hudson Associates.

communities around the MetroLink system remained geared to lower density and conventional development, successful development around station areas must incorporate an increased density or concentration of residents and employment in order to provide for real estate viability and to stimulate higher levels of ridership along the MetroLink system. Successful TOD must incorporate a mixture of land uses to be successful, including retail, residential, office, and entertainment uses. Finally, the design of TOD must orient around increased levels of transit usage and in encouraging all modes of travel, including walking and bicycling as well as vehicular and transit. The design of streets, greenways, and surrounding community connections must encourage more people to take MetroLink from various station areas and must provide good connections from nearby bus lines to the light rail system.

Overall, the design for MetroLink stations going forward must go beyond an orientation that considers the needs of commuters first and foremost and must outline a framework for the creation of true communities around the station areas. Just as well-planned districts such as the Central West End, South Grand, and the Delmar Loop have become symbols of the revitalization of St. Louis, local communities could create similar examples of development around their MetroLink stations over time that will serve as anchors for continued economic revitalization and expansion. The *TOD Framework Master Plan* follows the discussion of the key principles underlying successful TOD with a profile and evaluation of development potential at each station area. The document outlines opportunities and constraints at each station and provides a specific set of action items that local jurisdictions should complete in order to move transit oriented development efforts forward.

TOD Implementation

Emerging from the *Framework Master Plan* are three implementation studies and plans which will be underway in 2017.

- Northside-Southside MetroLink expansion to connect existing MetroLink lines to street-running routes in the City of St. Louis.
- Three potential MetroLink expansion routes in St. Louis County.
- Detailed TOD strategies for existing and potential MetroLink stations in the City of St. Louis.

The evolution of these planning efforts into implementation has resulted in a public-private partnership and engagement focused effort led by Bi-State Development. The economic development department at Bi-State engages with stakeholders who have interest or plans to develop projects around transit stations. Bi-State provides support to help produce the best TOD project for the developer, the community and the regional transit system. This engagement has included, but is not limited to:

- Assessing real estate needs on a case-by-case basis to determine solutions to issues of access to or use of Metro-owned land or under-utilized parking lots,
- Planning and implementing access from developments to the stations,
- Consultation on master planning efforts to improve transit access and TOD for communities and neighborhoods,
- Partnering with other stakeholders on Requests for Proposals (RFPs) to attract developers, and
- Implementing joint development agreements and pre-development planning and market studies for key opportunity sites.

Bi-State also tracks and provides information and data on TOD and economic development around stations throughout the regional transit system.

Since 2011, over \$6.5 billion in new public and private development has either been built, is under construction, or has been reasonably committed within a half-mile radius of the 38 MetroLink stations throughout the metropolitan area,

including the future Boyle station at Cortex, resulting in more than 15 million square feet of new or rehabilitated space. While Bi-State was not the developer for these projects, the agency takes an active role in attracting transit-oriented development and enabling the best possible TOD project for all stakeholders to be built and to be successful.

To view an interactive map of recent TOD activity throughout the St. Louis region, please visit: <http://arcg.is/2fknaR2>.

See *Appendix* for a description of site context, surrounding land use, and development potential near each of the MetroLink Stations located in St. Louis City and County.

SECTION 5

STRENGTHS, WEAKNESSES, OPPORTUNITIES, AND THREATS

Supported by 21 previous plans and reports published over the past 10 years, the following SWOT analysis provides a summary of the challenges that the St. Louis region faces and the opportunities for sustained prosperity and equitable growth. The SWOT analysis forms the basis for the Action Plan of vision, strategies, goals, and implementation.

Background

In recent years, a number of reports have reviewed the regional and county-level economies of Greater St. Louis. The analysis of the City and County’s relative strengths, weaknesses, opportunities, and threats (SWOT) is supported by 21 existing plans produced during the past ten years as well as feedback from the CEDS Strategy Committee.

The categorization that follows is reflective of the broad consensus of the reports reviewed. Most reports did not include a specific SWOT component; therefore, findings are integrated into a SWOT framework based on the assessment of the consulting team. It is worth noting that many of the issues raised are not specific to St. Louis, but apply to many regions with established economies seeking to adapt to the challenges of the evolving rust-belt economy.

Supplemental research was conducted as needed to expand the discussion of certain items and to extend topical coverage in accordance with EDA’s SWOT guidelines (see following page). However, content has not been robustly updated or cross-checked with the latest regional conditions and priorities. Therefore, this categorization reflects a starting point, rather than an end point, for the conversation about the current status of the regional economy of St. Louis.

EDA SWOT Guidelines

Consideration was also given in reviewing the content of the above listed plans and reports in light of the guidelines offered by EDA for SWOT analyses within a CEDS. The guidelines list a variety of topics that the analysis should address, and care has been taken to ensure coverage of each of these topics within the framework below, including for those areas that received limited attention in prior reports.⁷ Further, categorization takes into account the following definitions of the SWOT categories provided by EDA:

Strengths

are a region's **relative competitive advantages** (e.g., industry supply chains and clusters, extensive port, rail, and broadband assets, specialized workforce skills, higher education levels, collaboration among stakeholders) and **often are internal** in nature.

Weaknesses

are a region's **relative competitive disadvantages** (e.g., a risk-averse or change-resistant regional culture), also **often internal** in nature.

Opportunities

are chances or occasions for regional improvement or progress (e.g., expansion of a biosciences research lab in the region), **often external** in nature.

Threats

are chances or occasions for **negative impacts on the region or regional decline** (e.g., several companies in the region considering moving to lower-cost areas of the state), also **often are external** in nature.

CATEGORIZATION OF STRENGTHS, WEAKNESSES, OPPORTUNITIES, AND THREATS

- ◆ High value target sectors
- ◆ Institutions of higher education
- ◆ Cultural amenities
- ◆ Cost of living
- ◆ Commercial transportation and logistics

- ◆ K-12 education system in selected but high profile districts
- ◆ Concentration and suburbanization of poverty
- ◆ Equity of opportunity
- ◆ Public transportation
- ◆ Build out of County and City aging infrastructure
- ◆ Fragmentation of general and special purpose governments

- ◆ Expansion of global connections
- ◆ Cultivation of human capital
- ◆ Emergence of millennial generation
- ◆ Entrepreneurship
- ◆ Economic development network
- ◆ Promise Zone

- ◆ Slow population growth including sluggish immigration
- ◆ Negative image/perception
- ◆ Aging population
- ◆ Shrinking public sector finances
- ◆ Limited telecommunications/broadband access
- ◆ Flooding and increased temperature
- ◆ Energy standards

⁷The full list of recommended topic areas are: (1) state of the regional economy, (2) regional clusters, (3) external trends and forces, (4) workforce considerations, (5) spatial efficiencies/sustainability, (6) broadband needs, (7) energy needs, (8) natural hazards, (9) equitable development, and (10) partners/resources for economic development

Strengths

1. **High Value Target Sectors:** A consistently cited strength of the St. Louis region is the quality and diversity of high value economic sectors. These include plant and life sciences, biomedical technology, healthcare, aerospace, multimodal logistics, and financial services. According to the St. Louis Metropolitan Workforce Assessment (2013), Finance and insurance is the fastest growing sector, at a rate of 21.4 percent from 2007 to 2012. Looking ahead, the Health care and social assistance sector is projected to add 32,000 jobs by 2021, accounting for over \$1.5 billion infused into the economy through these additional wages. Past reports consistently identify St. Louis' continued leadership in the biosciences, due to not only the internationally recognized scientific research universities, but also the multinational corporations that call the region home.
2. **Institutions of Higher Education:** In St. Louis City and County, there is a large number of institutions of higher education, a high concentration of PhD level research, and an abundance of training opportunities for workers to further their education. In fact, the *Imagining Tomorrow Strategic Plan* for St. Louis County (2013) emphasizes the connection between these factors and a well-educated work force, which can then not only attract new businesses, but also encourage business expansion, and foster research growth in targeted sectors. The most prominent leaders include Washington University, University Missouri – St. Louis, and St. Louis University. As an example of their direct impact, the City of St. Louis had the fastest growth rate between 2000 and 2013 of college-educated, young professionals living in the urban core among all metropolitan areas. Harris-Stowe State University graduates the highest number of African-American males in the state of Missouri. This is important as it leads to increased workforce quality, innovation, and research, and well as the organic revitalization of neighborhoods.
3. **Cultural Amenities:** The St. Louis region is rich in cultural amenities that both add to the quality of life for the residents and serve as an attraction for visitors. The *OneSTL Plan* for a Vibrant, Healthy, Prosperous St. Louis Region (2013) notes that cultural institutions contribute significantly not only to the City's collective identity and overall quality of life, but also to the local economy. In fact, they reference the Arts and Economic Prosperity IV Study (2010) in their finding that attendees of cultural events spend on average almost \$25 per capita outside of the event itself, a stimulus for economies that are rich in these amenities. As an indicator of scale, St. Louis is reported to be second only to the Washington D.C. metro area in its volume of free museums, cultural institutions, and attractions. These cultural amenities give character to the region and ultimately contribute to the quality of place that aids in the attraction of workforce talent to the St. Louis area.
4. **Competitive Cost of Living:** The St. Louis region offers a very competitive cost of living, an asset that can help attract and keep talent in the area, and also impacts quality of life for residents. The cost of everyday necessities in St. Louis, such as groceries, transportation, and health care are close to the national average, but the cost of housing is notably lower, with St. Louis rated among the most affordable metros in the country for housing.⁸ Nearly 85 percent of housing is considered affordable for families earning the median income and the cost of living is below the national average. In fact, the region was recently ranked as the fifth most affordable middle-income housing market among 86 major metropolitan markets across nine nations.⁹
5. **Interstate Air, Rail, Shipping, and River Transportation:** St. Louis is located at the union of the Missouri and Mississippi rivers and thus has access to water and fertile soil that aids in the agricultural sector. In addition to the two rivers, there are also four interstates, an international airport, and six Class 1 railroads that round out this logistics hub (as identified in the AECOM plan). The infrastructure and strategic location position the region as a transportation center that helps to attract and retain businesses. The region holds the northernmost ice-free port on the Mississippi River, which is combined with connections in all directions with heavy rail and interstate trucking. The *STL Sustainability Plan* notes that this not only facilitates the distribution and transfer of goods, but of logistics industries – a key sector for the City.

⁸ Payscale Cost of Living Calculator (<http://www.payscale.com/cost-of-living-calculator/Missouri-St.-Louis>)

⁹ New Geography, "Life is Good in St. Louis", 3/13/15 (<http://www.newgeography.com/content/004869-life-good-st-louis>)

Weaknesses

- 1. K–12 Public School System:** The public school system is consistently identified as a concern for the region. According to the *OneSTL* Plan, K-12 education surfaced as a primary concern at nearly every public meeting of that planning process. That said, there are 24 school districts in St. Louis County, only two of which are presently unaccredited. But these trigger disproportional media attention, especially when many of the students of these districts become transfers to accredited districts. There is uneven educational quality, access, and alignment among the public school districts that includes two unaccredited school districts in high poverty areas. This exacerbates an achievement gap and a concerning graduation rate for City schools. *OneSTL* also points to the fact that the difference in education quality also effects neighborhood stability, as a public school's ranking significantly affects where families choose to live, a demand that directly influences property values in the different districts. Educators in these districts emphasize inadequate state funding, and with the looming possibility of de-accreditation, this issue has become a top concern for families, educators, business leaders, and the local government alike. Ultimately, this is a multi-faceted problem that negatively affects the talent soon to enter the workforce, stratifies neighborhoods based on school quality, and further increases economic opportunity gaps.
- 2. Increasing Concentration and Suburbanization of Poverty:** Poverty is closely linked to such concerns as academic struggle, increased crime, and poor health outcomes, all of which are prevalent in and around St. Louis. According to the *Imagining Tomorrow*, St. Louis County's Strategic Plan, the northern inner-ring and northeast suburban communities have increased poverty levels with two extreme poverty tracts (40 percent + below the poverty line) and 24 high poverty tracts (20-40 percent) as well as two unaccredited school districts. Localized increases in crime rates and decreases in health outcomes are also found in these concentrated areas that disproportionately affect minorities, children, and those with disabilities. The increased concentration of poverty is a concern as support systems and infrastructure are not readily available in the suburbs to handle this historically "urban issue." Furthermore, the region's poverty rate hasn't followed the peaks and valleys of the country as a whole, but has instead steadily risen for over a decade.
- 3. Equity of Opportunity:** There are significant challenges in equity and inclusion of opportunity in the region, with poverty affecting minorities and children at a disproportionate rate. According to the *Where We Stand* report (2011), in 2009 black residents were 3.4 times more likely to live below the poverty line. In fact, the median income for black households was less than \$29,000 whereas it was over \$57,000 for white households. In an economic sense, St. Louis is undercapitalizing on its human capital potential. The *OneSTL* Plan notes the low probability of upward mobility, and cites income segregation and the increased likelihood of lower quality schools in low income areas as two probable contributing factors. Racial disparity is also a concern for public health, as the black infant mortality rate was more than three times as high as that for white infants. The 2005 CEDS notes that apart from the obvious implications of persistent inequality, the atmosphere of racial tension also deters both homeowners and businesses from calling certain areas home, a limitation that further inhibits economic growth and development.
- 4. Public Transportation:** The suburbs of St. Louis remain auto-oriented, with very little public transportation connection between the central core and the outskirts of the region. The *Where We Stand* Strategic Assessment of the St. Louis Region suggests that the region's low ranking in mobility reflects that the region's public transportation system does not provide adequate coverage or frequency for citizens without automobiles. Historically, there has been an underinvestment in regional logistics infrastructure, specifically lacking in the auto-oriented suburbs. According to *OneSTL*, over the past five decades, investments have focused on the highway system, an overreliance that contributes to the region's poor air quality, deters new businesses from moving to the region, and limits the availability of alternative modes of transportation. The changing demographics of the region, most notably the increased Millennial population, have caused a shift in preferences toward a more multi-modal system priority on connecting workers to the region's jobs.
- 5. Build-Out of County and City:** St. Louis City and County are widely considered "mature" with little remaining green field land available to facilitate growth. According to the 2005 CEDS for St. Louis County, land availability was even then noticeably shrinking, prices were rising, and it had become difficult to acquire large tracts. Indeed, the relative lack of easily developed land combines with the aging infrastructure (roads, bridges,

utilities) to demand redevelopment strategies that focus on infilling areas that have been underdeveloped for a long time or that have deteriorated over time. Such issues are fairly common in urban cities like the City of St. Louis (though much is to be re-developed even there) but are relatively new to suburban communities.

6. **Government Fragmentation:** The City of St. Louis and St. Louis County are separate political jurisdictions. Within St. Louis County, there is a patchwork of 90 municipalities, all with their own elected governments and most with police departments to fund – an arrangement that is costly and hinders the ability to solve collective problems. Given citizens’ needs and service demands, it is easy to understand how many of these small municipalities are fiscally strained. Further, abutting municipalities often see themselves in competition with one another for businesses via tax incentives, leading to cycles of “poaching” that can further drive down municipal revenues.¹⁰ The infamous route that many municipalities take to mitigate this problem is resorting to traffic tickets and fines for revenue, a tactic that has contributed to tension between residents and their elected officials and law enforcement¹¹ and has led to a Missouri Supreme Court ruling and General Assembly legislation strongly inhibiting such fiscal tactics. In turn, many of the smaller municipalities are left struggling for resources.

¹⁰ Bloomberg, “The County Map That Explains Ferguson’s Tragic Discord”, 08/15/14 (<http://www.bloomberg.com/bw/articles/2014-08-15/how-st-dot-louis-countys-map-explains-fergusons-racial-discord>)

¹¹ Washington Post, “What happens when a metropolitan area has way too many governments”, 02/18/15 (<http://www.washingtonpost.com/blogs/wonkblog/wp/2015/02/18/what-happens-when-a-metropolitan-area-has-way-too-many-governments/>)

Opportunities

1. **Expansion of Global Connections:** Greater St. Louis has the ability to build the capacity to expand global connections, relations, and investments. Opportunities include the growing export markets in Asia, immigration of talented labor, and companies currently reshoring their presently foreign workers. According to the *Imagining Tomorrow St. Louis County Strategic Plan (2013)*, regional exports are expected to increase by more than 70 percent by 2023. Increasing international business and trade not only can raise the region’s profile as an exporter, but also is expected to help attract foreign-direct investors, all of which would help to boost the regional economy. The *OneSTL Plan* asserts that opportunity to develop a niche in the global market, despite the loss of manufacturing jobs and company headquarters, is upon St. Louis; the Metro St. Louis Export Plan developed by the World Trade Center of St. Louis provides a path forward.
2. **Cultivation of Human Capital:** Broad long-term economic trends trace a shift from reliance on natural resources to a greater cultivation of human capital. This entails not only a focus on talent attraction, but also importantly on retention, as well as the capitalization of the region’s research strengths. Attention should thus also be paid to improving education and workforce development in order to build stronger human capital within the existing regional population. Stakeholders at the SLEDP Planning Forum reported the importance of the intentional inclusion of individuals, institutions, and communities and how fostering inclusionary diversity will inherently attract domestic and international migrants with higher job skills. The *STL Sustainability Plan* notes how smart learning hubs, such as incubators, as well as collaborative work environments (of which there are already multiple throughout St. Louis), can provide the necessary assistance and support to cultivate human capital.
3. **Emergence of the Millennial Generation:** The Millennial generation is the nation’s largest, numbering about 80 million – slightly larger than the Baby Boomers. In St. Louis County, Millennials, born between 1980-2000, make up 26 percent of the population. The Millennials are more highly educated than previous generations and many are in higher education or the early stages of their careers. However, the reports note that this group struggled to begin their careers in the post-recession economy, with only 41 percent

of 18-29 year olds working a full-time job. The AECOM Regional Study makes sense of this lack of job opportunity by noting that the workforce is swollen with Baby Boomers delaying their retirement, which means fewer positions and less upward mobility for the younger workers who are first to fire and last to hire. However, as retirement levels rise in the coming years, job opportunities will open and it is expected that the younger generation will not even be able to fill all resulting open positions. Alternative modes of public transportation, as well as mixed-use housing, are two fundamental desires of this generation that are currently not widely available in the City and County, and one quarter of recent graduates are moving back in with their parents. On this front, it is important to note that in June 2015, the County Executive authorized a \$1 million study to determine the feasibility of possible MetroLink expansion routes.¹² St. Louis City has also obtained funding to further evaluate development opportunities along the North/South route. Attention to issues like education, public transportation, growing downtown neighborhoods with mixed-use housing, and job creation are opportunity areas through which metro St. Louis can grow and retain this demographic group.

4. **Entrepreneurial Support:** There is strong and growing access to capital, facilities, services, etc. for entrepreneurs in Greater St. Louis. New venture funds, accelerators, incubators, mentor programs, early-stage capital, and the Arch Grants, are just a few programs that have increased the likelihood of the continuation of the start-up scene. The Helix Center, a biotechnology incubator, is a great example of the kind of support that is specifically offered for entrepreneurs in the biosciences. T-Rex, located Downtown, leads an innovative cybersecurity effort.¹³ Metro St. Louis was recognized as a hot newcomer in the high-tech start-up scene, as it matures, the ability to retain the businesses founded, grow those that have succeeded, and attract new entrepreneurs becomes the new challenge.¹⁴
5. **Economic Development Network:** Although there is a large network of economic development organizations and leaders throughout St. Louis, many studies consistently note the historical fragmentation in economic development and how this prevents the St. Louis region from living up to its economic potential. According to *OneSTL*, municipalities have historically competed with one another to secure new development, which leads to development moving from one area to another, as opposed to growth in

the whole region. The *EDP Working Strategic Plan* (2014) notes that the St. Louis Economic Development Partnership was established in 2013 in hopes of combining regional efforts into an integrated economic development platform. The formation of this organization is an opportunity for the region to finally see a cohesive economic development strategy.

6. **Promise Zone:** In April of 2015, a large portion of North St. Louis City and County (encompassing approximately 200,000 residents) was named as a Promise Zone by the United States Department of Housing and Urban Development (HUD). Out of 120 contenders nationwide, St. Louis was one of only six urban winners. The goal of St. Louis' participation in this program is to transform the most distressed communities of North St. Louis City and County.¹⁵ This designation gives the area preferential access to federal agencies and programs, as well as resources to improve law enforcement, crime prevention, job training, education, and healthcare. It also provides a HUD coordinator and five new AmeriCorps members.

A number of significant initiatives and developments are already having a positive impact on the Promise Zone to date: 1) The Career Pathways Bridge skills-training and employment initiative received a \$5 million federal grant, which will allow for the training of an additional 3,000 workers in North St. Louis City, 2) a portion of the Promise Zone will benefit from the \$4.7 billion MSD Project Clear (see page 48 for description), and 3) the announcement of the National Geospatial-Intelligence Agency (NGA) building a new \$1.7 billion headquarters will bring more than 3,000 jobs to North City and potentially catalyze new development.

¹⁵ St. Louis County Missouri, "St. Louis City, County Named Promise Zone", 04/29/15 (<http://www.stlouisco.com/Community/News/Article/1127/St-Louis-City-County-Named-Promise-Zone>)

Threats

1. **Slow Population Growth:** There have been more than 40 years of sluggish population growth in metropolitan St. Louis, with annualized growth rates averaging less than 0.5 percent in the last decade, according to the AECOM study. This growth rate was significantly lower than peer counterparts, benchmark regions, the state of Missouri, and the nation as a whole. Meanwhile, St. Louis County added almost no net new population and St. Louis City continues to lose population (though gaining in the Central Corridor). This can be partially attributed to the lack of immigration, as only 4 percent of the population is made up of immigrants. Another contributing factor is ongoing “brain drain,” as many young professionals who receive their education in St. Louis leave after graduation. That said, St. Louis County’s brain drain analysis showed a slight net gain in recent years. A declining birth rate due to aging of population is significant in the County, however. Decreasing household sizes, in part due to the aging population, is another area of concern for population decline, raised in the *Imagining Tomorrow Strategic Plan*. Slow population growth is a concern as, according to the Economic Demographic and Entrepreneurial Profile, it limits job growth and entrepreneurial activity, two fundamental drivers of the economy.
2. **Negative Image/Perception:** Past plans consistently identified the areas of high poverty concentration, localized areas of higher crime, failing school districts, and specific incidents that catch both national and international attention as drivers of a negative picture of the region for outsiders. Furthermore, the AECOM study noted that the region itself has a surprisingly negative self-image and relative complacency with the status quo. The most robust commentary on this matter was found at the SLEDP Stakeholder Planning Forum where the negative image/perception of the St. Louis region was consistently mentioned as a major challenge. In addition to echoing the above concerns, participants also emphasized an “inferiority complex” and lack of positive promotion despite the fact that people who move to St. Louis are “pleasantly surprised.” There is very little branding of the region as a whole, and instead of “selling” St. Louis to the population that they want to attract, the posture tends to be more defensive. An offensive stance should be taken to emphasize a more positive picture of the region.
3. **Aging Population:** The Baby Boomer generation accounts for more than 28 percent of the population as of the 2010 census, the largest age group in St. Louis. The *Imagining Tomorrow Strategic Plan* expects that their retirement will be different from past generations as many will work later in life and remain in their communities instead of moving to warmer climates. Some will look to move into multi-use housing developments that contain retail spaces, grocery stores, restaurants, sidewalks, and public transportation nearby, essentially requiring a redevelopment of their suburban spaces. Others will choose to stay in their homes in the auto-oriented suburban areas, but will eventually need to rely on public transit as an alternative mode of transportation. In both situations, the region will need to develop both residential and transportation infrastructure to suit the Baby Boomers’ needs as for those who live past 70, it is expected that they will outlive their driving age by 7 – 10 years. Addressing health needs will also be a concern, with the need for adequate medical centers and support services increasing. Ultimately, this first “suburban generation” will have a large influence on the social and physical environment of St. Louis.
4. **Shrinking Public Sector Finances:** There has been a slow and painful recovery in public sector finances after many years of decreased revenue associated with the recession. This limits the potential for collective action around economic development. The AECOM Regional Study notes that this creates difficult decisions regarding project prioritization of aligning scarce resources with the extensive community reinvestment desperately needed.
5. **Telecommunications and Broadband Access:** In 2014, NEF (formerly known as New England Fiber) conducted a telecommunications and data center study of the St. Louis region, and ultimately published a connectivity report¹⁶ that includes research, analysis, and recommendations. The findings show that while the region is well connected in traditional infrastructure and has enough physical fiber to be

¹⁶ St. Louis Regional Broadband Summit, “St. Louis Connectivity Report”, 2014 (<http://stlbroadbandsummit.org/st-louis-connectivity-report/>)

a regional telecommunications hub, it has yet to take advantage of the connectivity wealth at hand. St. Louis has to establish itself as a key telecommunication market in order to gain the services of the providers that already have the infrastructure in the region.

6. **Flooding and Increased Temperature:** Between 1993 and 2013, the Mississippi River crested the major flood stage 11 times, and this risk of flooding is expected to only increase in the coming decades. The *OneSTL Regional Sustainability Plan* notes that the heavy industry of the region is contained within levee-protected areas, but maintaining and improving this system is crucial to protecting both industries and riverfront communities. Also, the average temperature, as well as number of days with temperatures above 95°, is expected to increase in the coming decades, being both a public health concern as well as a material concern for pavement, bridge expansion, as well as the use of electricity. Measures such as registries for vulnerable individuals during heat waves, as well as street trees to avoid the urban heat island effect should all be taken seriously as this is a looming concern. St. Louis needs to prepare to ensure resiliency against forthcoming issues over which it lacks direct control.
7. **Energy Standards:** Coal-fired power plants are the largest polluters in the state, yet Missouri is highly dependent on them. This puts St. Louis at a disadvantage as there are not only health ramifications, but also missed economic opportunity in the growing clean energy sector. St. Louis City and County are EPA designated “Nonattainment Counties” and are currently out of compliance with federal air quality standards. The St. Louis region also ranks among the top 10 regions in the country for having the poorest air quality and among the top 20 regions for asthma risk.¹⁷ The City and County are also missing out on job creation that neighboring states are benefiting from as a result of clean energy investment. This lack of alignment with the new direction of energy in which much of the country is headed puts St. Louis at a disadvantage on a national scale, especially with the potential for stricter industry regulations moving forward.

¹⁷East West Gateway Council of Governments. Where We Stand. 7th Addition.

SECTION 6

ACTION PLAN

The Action Plan is the culmination of the existing plans, regional profile, and benchmarking and direct input from the CEDS Strategy Committee. Over four working sessions, the Strategy Committee contributed to the refinement of the SWOT analysis, development of the vision and goals, and the identification of specific policies, programs, and investments to support implementation.

Action Plan Framework

The Action Plan was essentially built from the bottom up. The technical review of existing plans, analysis of demographic and economic data, benchmarking, and completion of the vacant land inventory all contributed to an initial outline of the strengths, weaknesses, opportunities, and threats (SWOT) of St. Louis City, County, and region. After refinements of the SWOT analysis from direct feedback from the Strategy Committee, this formed the basis for the Vision and Goals, or using EDA’s terminology “defining regional expectations.”

After the second working session with the Strategy Committee the vision, strategies and goals began to take shape in accordance to EDA’s “Plan of Action” specifications (see description to the right). In order to best realize the collective vision of building upon the region’s creative capacity and assets to grow the economy and promote equitable opportunity for all residents, four high level strategies were developed:

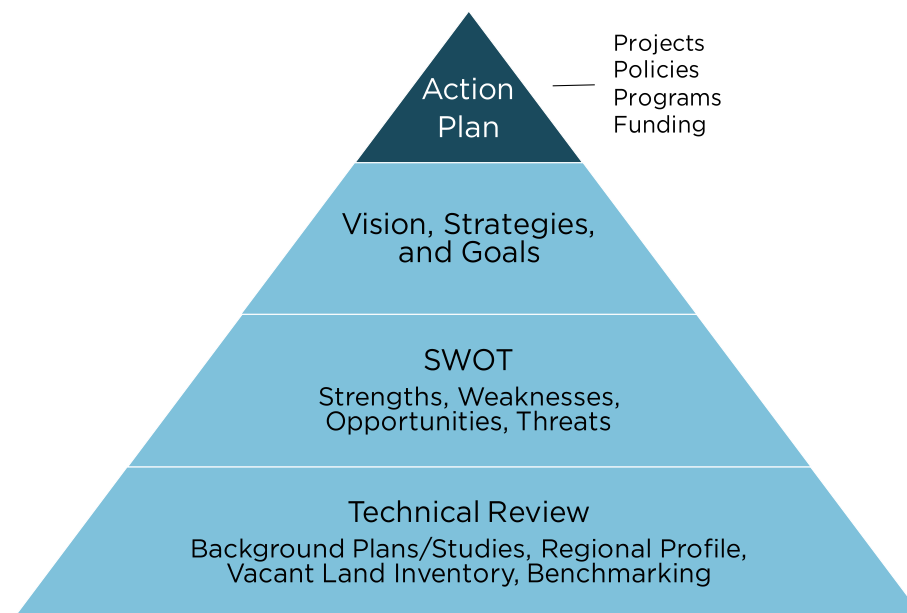

1. Investing in Infrastructure and Real Estate Development
2. Supporting Entrepreneurship and Innovation
3. Leveraging our Assets
4. Developing our Workforce

Within these strategies, dozens of goals were then developed, again supported by the SWOT analysis. Based on input from the final working session with the Strategy Committee and follow-up conversations with key representatives from St. Louis Development Corporation, St. Louis Economic Partnership, and St. Louis County government, specific projects, policies, programs, and other activities were identified as a means for pushing the goals forward. The Action Plan is thus a culmination of existing plans and analysis and direct feedback from key stakeholders, but more importantly, it is well-aligned with regional assets, policies, and governance structures with activities that are tangible and feasible.

According to the US Economic Development Administration, the CEDS “Plan of Action” should incorporate the following:

- Promotes economic development and opportunity;
- Fosters effective transportation access;
- Enhances and protects the environment;
- Maximizes effective development and use of the workforce consistent with any applicable State or local workforce investment strategy;
- Promotes the use of technology in economic development, including access to high-speed telecommunications;
- Balances resources through sound management of physical development;
- Obtains and utilizes adequate funds and other resources.

STRATEGY 1

Investing in Infrastructure and Real Estate Development

INFRASTRUCTURE

GOAL 1.1: Stimulate investment and reinvestment by supporting catalytic development and redevelopment with major infrastructure improvements and upgrades.

GOAL 1.2: Improve regional connectivity and reduce vehicle miles traveled by expanding multi-modal transportation options and adjusting land use and development incentive policies.

GOAL 1.3: Increase private real estate values, stimulate future investment and redevelopment, and provide multi-modal transportation opportunities through streetscape improvements, road diets, and appropriate street designs.

GOAL 1.4: Promote “smart technology” and innovation to ensure stable energy and information networks for regional economic and job growth.

GOAL 1.5: Increase access to the region’s natural amenities and recreational opportunities by supporting the implementation of the regional greenways and trails system.

GOAL 1.6: Support a variety of additional infrastructure improvements that increase access and safety for pedestrians and vehicles and further reduce barriers to pedestrian and bicycle connectivity.

REAL ESTATE DEVELOPMENT

GOAL 1.7: Leverage the redevelopment potential of land and buildings on and adjacent to Lambert-St. Louis International Airport.

GOAL 1.8: Stimulate sustainable infill development by leveraging existing and future transit nodes and emphasizing the redevelopment of under-performing commercial corridors.

GOAL 1.9: Develop shared regional data and administrative systems to promote real estate development and reinvestment activity.

STRATEGY 2

Supporting Entrepreneurship and Innovation

GOAL 2.1: Leverage existing, or promote creation of new, tax credit programs, lending, and other funding programs that support entrepreneurs and the small business community.

GOAL 2.2: Continue providing resources to nurture high-growth startups and technology firms in the region.

GOAL 2.3: Support talent development, business innovation and new business creation for young professionals.

GOAL 2.4: Expand opportunities for minority- and women-owned businesses.

GOAL 2.5: Continue expanding the St. Louis region as a hub for agriculture and bio-science innovation and technology.

STRATEGY 3 **Leveraging our Assets**

GOAL 3.1: Support and/or target business retention and expansion activities.

GOAL 3.2: Improve regional, national, and international connections for business growth.

GOAL 3.3: Improve internal and external perceptions of the region with marketing and outreach programs aimed at attracting and retaining talent and establishing a positive local identity.

STRATEGY 4 **Developing our Workforce**

GOAL 4.1: Develop and expand workforce development programs that focus on technical education, especially for individuals living in disadvantaged communities.

GOAL 4.2: Continue investing in multi-modal transportation options, trail systems, higher density housing, and walkable communities as means to attract and retain a mobile workforce.

GOAL 4.3: Develop systems and partnerships that better link educational resources with employment opportunities.

GOAL 4.4: Create talent attraction and retention programs for higher educated and skilled individuals.

GOAL 4.5: Accelerate opportunities for the region's foreign-born populations.

GOAL 4.6: Develop comprehensive STEM and early education resources and curricula to create a prosperous and highly adaptable future workforce.

Investing in Infrastructure and Real Estate Development

INFRASTRUCTURE

GOAL 1.1

Stimulate investment and reinvestment by supporting catalytic development and redevelopment with major infrastructure improvements and upgrades.

1. Continue strong implementation of the St. Louis Regional Freight District Plan to reinforce the St. Louis region as a primary national and international multi-modal shipping and logistics hub.

ST. LOUIS CITY

- Complete the upgrades to the St. Louis Municipal River Terminal and supporting facilities and access routes.
- Replace the Merchants Railroad Bridge on the north Mississippi Riverfront per plans of the Terminal Railroad Association.
- Initiate planning and engineering for upgrade of the MacArthur Railroad Bridge on the south Mississippi Riverfront.
- Initiate and complete plans for redevelopment of the to-be-former NGA site on the south Mississippi Riverfront in order to achieve seamless transition to future uses.
- Redevelop the former Solutia industrial site in south St. Louis.
- Rebuild Hall Street/Route H from East Grand to Riverview Drive, and Riverview Drive/Route H to Interstate 270.

ST. LOUIS COUNTY

- Implement I-270 improvements from Lilac Avenue to Lindbergh Boulevard in Missouri.
- Implement Boeing Composite Center Access Improvements (Banshee and other roadways, and rail) in Berkeley, Missouri.
- Expand rail capacity of the Class I railroad companies to achieve better and more efficient access to industrial sites throughout the region.
- Develop Missouri River port to enhance trade.

REGIONAL/ CITY-COUNTY

- Create additional, and improve existing, intermodal transfer points involving rail, river, and road freight movements.
- Replace the I-270 Mississippi River Bridge.

2. Relocate the National Geospatial-Intelligence Agency (NGA) from the south Mississippi Riverfront to northwest downtown edge. Retain 3,100 jobs, with the potential for doubling that capacity; and leverage NGA development site with Stan Musial Veterans Memorial Bridge and related road improvements as anchor on near north side for additional housing, health care services, retail stores, office space, and industrial buildings.

ST. LOUIS
CITY

- Leverage NGA development site with Stan Musial Veterans Memorial Bridge and related road improvements to stimulate development of new housing, health care services, retail stores, office space, and light industrial buildings.
- Construct a full highway interchange at I-64 and Jefferson Avenue to accommodate increased commuting traffic to NGA and study the resulting need for adjustments to adjacent interchanges due to this addition of capacity.
- Construct streetscape and bike-pedestrian improvements to serve the surrounding neighborhoods and provide alternatives for commuting and recreation.
- Construct Cass Avenue street improvements from the Stan Musial Bridge exit west to Jefferson Avenue (Phase 1) and to Grand Boulevard (Phase 2).
- Construct Jefferson Avenue/Parnell Street improvements from Interstate 64 to St. Louis Avenue (Phase 1), from St. Louis Avenue to Natural Bridge Road (Phase 2), and from Interstate 64 south to Interstate 44 (Phase 3).

ST. LOUIS
CITY

3. Implement infrastructure improvements specified in the *2011 North Riverfront Commerce Corridor Land Use Plan*.

- Pursue a variety of infrastructure improvements to support the implementation of the North Riverfront Commerce Corridor Plan.
- Reconstruct Hall Street (Route H) from East Grand Avenue north to Riverview and from Riverview to Interstate 270.
- Reconstruct Branch Street from the Mississippi River levee to Old North St. Louis to include pedestrian and bicycle improvements.
- Construct streetscape and bike/pedestrian improvements on North Broadway.
- Improve all of the grade-level railroad crossings to increase safety and enhance truck movements.

(continued from previous page)

4. Implement the 2015 North Riverfront Redevelopment and Open Space Plan (Eads Bridge to Musial Bridge, North Broadway/I-44 to Mississippi River).

ST. LOUIS CITY

- Pursue infrastructure improvements as required to support development of the North Riverfront; from Eads Bridge to Stan Musial Veterans Memorial Bridge, from North Broadway/I-44 to the Mississippi River.
- Complete land assembly to attract potential development opportunities.
- Construct the open space and trail connections per the upcoming Great Rivers Greenway Riverfront Parks Plan, together with planned infrastructure improvements, between Arch Grounds and North Riverfront Trail to support market-based development.

5. Target St. Louis County economic development priorities where substantial planning is underway.

ST. LOUIS COUNTY

- Implement the Spanish Lake Bellefontaine Corridor Retail Study & Redevelopment Strategies.
- Implement the Lemay Comprehensive Plan.
- Implement master plan for the plant sciences corridor in Creve Coeur and environs, and identify other potential districts and projects.
- Support the redevelopment of the former Northwest Plaza, Jamestown Mall, and Crestwood Court sites.
- Support redevelopment of the former Daimler Chrysler Plant in Fenton.

GOAL 1.2

Improve regional connectivity and reduce vehicle miles traveled by expanding multi-modal transportation options and adjusting land use and development incentive policies.

1. Expand public transit lines, modes, and facilities in order to provide equitable-access to a wider range of transportation options and better access to jobs and housing for all citizenry in the St. Louis region.

- ST. LOUIS CITY**
 - Complete engineering, economic development, and environmental planning (EIS / NEPA) studies for the proposed Northside-Southside MetroLink alignment in the City of St. Louis.
 - Initiate the environmental planning (EIS) / (NEPA) phase of the St. Louis Streetcar Project (established in the St. Louis Streetcar Study).
 - Complete engineering and economic development studies for MetroLink expansion in St. Louis County.
- ST. LOUIS COUNTY**
 - Collaborate with Bi-State Development/Metro to implement major components of *Moving Transit Forward!*
 - Improve bus experience (shelters, amenities), frequencies, fewer stops, smaller capacity vehicles for faster operation for a variety of locations through the City of St. Louis and St. Louis County.
- REGIONAL/ CITY-COUNTY**
 - Initiate the environmental planning (EIS) / (NEPA) phase and any additional planning for Bus Rapid Transit alignments.
 - Implement Bus Rapid Transit (BRT) plans from north, west, and south St. Louis County to Downtown St. Louis.
 - Implement common payment system for Metro buses, MetroLink, streetcars, taxis, bike sharing, and both public and private parking facilities.

2. Create a region-wide land use /transportation plan and financing review system broader than vehicular transportation networks as is now the responsibility of East-West Gateway Council of Governments.

3. Develop voluntary and pilot policies supporting more sustainable land use patterns and urge that they be incorporated into zoning and related land use regulatory ordinances, such as form-based codes and compact development regulations.

4. Adjust real estate and development incentive programs that encourage more efficient use of land and increase walkability by requiring transit-supportive densities, mixing-of-uses, and other land use best management practices.

Investing in Infrastructure and Real Estate Development

INFRASTRUCTURE

GOAL 1.3

Increase private real estate values, stimulate future investment and redevelopment, and provide multi-modal transportation opportunities through streetscape improvements, road diets, and appropriate street designs.

- 1. Invest in Downtown St. Louis streets to improve the quality of the place for attracting visitors, residents, and new business development, as part of the Downtown Development Action Plan and other downtown planning efforts, including specifically:**

ST. LOUIS CITY

Downtown Street & Streetscape Improvements

- 7th Street: Washington Avenue to Walnut Street
- 8th Street: Washington Avenue to Chouteau Avenue
- 14th Street: Cass Avenue to Chouteau Avenue
- 22nd Street: Market Street to Dr. Martin Luther King Drive
- Broadway Street: Cole Street to Chouteau Avenue
- Chouteau Avenue: Wharf Street to Jefferson Avenue
- Clark Avenue: 4th Street to 18th Street
- Market Street: Memorial Drive to Jefferson Avenue
- Pine Street: 4th Street to 18th Street
- Spruce Street: 8th Street to Tucker Boulevard
- Tucker Blvd: Washington Avenue to Chouteau Avenue
- Washington Avenue: Tucker Boulevard to Jefferson Avenue

- 2. Implement a wide range of corridor and neighborhood improvements in the City of St. Louis, including specifically:**

ST. LOUIS CITY

- The Skinker-DeBaliviere Neighborhood Urban Design & Development Plan.
- The Grand Center Great Streets Master Plan.
- South Grand Improvements (phased, Utah Street to Carondelet Park).
- Gravois Avenue / Tucker Avenue Streetscapes (phased, Civic Center to Hampton Loop).
- South Jefferson Avenue / South Broadway (phased, Meramec Street to Russell Boulevard).
- Chippewa Street Improvements (phased, South Jefferson Avenue to the River Des Peres).

**ST. LOUIS
CITY**

- Morgan Ford Road Streetscape (Tower Grove Park to Fyler Avenue).
- North Broadway corridor improvements in the Baden neighborhood (coordinated with *North Riverfront Commerce Corridor Plan*).
- Goodfellow Road corridor improvements (I-70 to Natural Bridge Road).
- Natural Bridge Road corridor improvements (Goodfellow Road to North Grand Avenue).
- Goodfellow Boulevard Streetscape (phased, Delmar Boulevard to West Florissant Avenue).
- Natural Bridge Avenue / North Florissant Improvements (phased, coordinated with BRT/METRO).
- Dr. Martin Luther King Jr Drive / Cass Street Improvements (phased, North Tucker Boulevard to the Rock Road Loop).
- North Grand Avenue Streetscape (phased, Page Avenue to West Florissant Avenue).
- The Forest Park Southeast (FPSE) Neighborhood Plan, *A Vision for the Forest Park Southeast Neighborhood*
- Dr. Martin Luther King Drive Great Streets program/plan west of Union Boulevard
- 14th Street Great Streets program/plan within Choice Neighborhood

3. Implement key projects from the Arch-Laclede’s Landing Station Area Transit-Oriented Development Plan, and subsequent studies relative to the north riverfront, including:

**ST. LOUIS
CITY**

- 1st Street: Dr. Martin Luther King Drive to Arch Grounds
- 2nd Street: Dr. Martin Luther King Drive to Morgan Street
- Lumiere Place Boulevard (3rd Street): Laclede’s Landing Boulevard to Arch Grounds
- Dr. Martin Luther King Drive: Leonor K. Sullivan Boulevard to Lumiere Place Boulevard (3rd Street)
- 1st Street: Dr. Martin Luther King Drive to Arch Grounds
- 2nd Street: Dr. Martin Luther King Drive to Morgan Street
- Lumiere Place Boulevard (3rd Street): Laclede’s Landing Boulevard to Arch Grounds
- Dr. Martin Luther King Drive: Leonor K. Sullivan Boulevard to Lumiere Place Boulevard (3rd Street)
- Laclede’s Landing Boulevard: Leonor K. Sullivan Boulevard to Lumiere Place Boulevard (3rd Street)

STRATEGY 1:

Investing in Infrastructure and Real Estate Development

(continued from previous page)

ST. LOUIS CITY

- Morgan Street: Leonor K. Sullivan Boulevard to Lumiere Place Boulevard (3rd Street)
- Lucas Avenue: Leonor K. Sullivan Boulevard to Lumiere Place Boulevard (3rd Street)
- Reopen and add street improvements on Lucas Avenue from 2nd Street to 3rd Street
- Cobblestone streets to be reconstructed, including:
 - ◊ 2nd Street (Morgan Street to Laclede's Landing Boulevard)
 - ◊ 1st Street (Eads Bridge to Laclede's Landing Boulevard)
 - ◊ Morgan Street (3rd Street to Leonor K. Sullivan Boulevard)
 - ◊ Lucas Ave (2nd Street to Leonor K. Sullivan Boulevard)
 - ◊ Commercial Street (Eads Bridge to Laclede's Landing Boulevard)
 - ◊ Commercial Street: Carr Street to Arch Grounds

4. Enhance neighborhood amenities in targeted areas of St. Louis County including access to education and employment, as well as aesthetic and functional upgrades to community placemaking.

ST. LOUIS COUNTY

- Implement 2016-2020 Complete Streets Transit Connections Program.
- Continue implementation of St. Louis County Complete Streets Initiative.
- Implement West Florissant Great Streets project beginning with design work in 2016.
- Implement Gravois Road (River Des Peres to Mackenzie Road) Great Streets Initiative.
- Implement Lemay East of Broadway Neighborhood Master Plan.
- Implement Spanish Lake Bellefontaine Road Retail Study & Redevelopment Strategies.
- Update and implement St. Louis County Bicycle Policy.
- Update and implement St. Louis County Sidewalk Policy.
- Implement the Page Avenue Great Streets Plan.
- Partner with Great Rivers Greenway to construct a greenway on Page Avenue in the Pagedale Town Center.

5. Preserve and improve existing infrastructure to promote safer, more efficient, and multi-modal transportation systems.

ST. LOUIS CITY

- Replace or repair the Compton Avenue bridge deck over Mill Creek rail yard.
- Replace or repair the Lindell-Union bridge at Forest Park Parkway over the MetroLink tracks (two bridge structures).
- Replace or repair the Grand Drive bridge over Forest Park Parkway and MetroLink (two bridge structures).
- Remove the Forest Park Parkway Underpass at Grand Avenue and construct an at-grade intersection.

ST. LOUIS COUNTY

- Implement Roadway Resurfacing throughout St. Louis County.
- Implement 2016 Concrete Replace Program in St. Louis County.
- Implement 2017-2020 Concrete Replacement/Mill and Overlay in St. Louis County.
- Implement 2016-2020 County Road System (CRS) Collector Overlay.
- Implement 2016-2020 County Road System (CRS) Pavement Improvement Program.
- Implement 2016-2020 County Arterial Road System (ARS) Crackseal Program.
- Implement 2016-2020 County Arterial Road System (ARS) Pavement Improvement Program.
- Implement 2016-2019 County Transportation Alternatives Program.
- Implement 2016-2020 ADA County Improvements Program.
- Implement identified bridge projects throughout St. Louis County, including replacement, safety improvements, and signal upgrades.
- Implement 2016 Intelligent Transportation System (ITS) Program in identified areas throughout St. Louis County.

6. Evaluate, prepare or update plan for neighborhoods across the region including Downtown, the Central Corridor to I-170.

Investing in Infrastructure and Real Estate Development

INFRASTRUCTURE

GOAL 1.4

Promote “smart technology” and innovation to ensure stable energy and information networks for regional economic and job growth.

- 1. Develop and expand gigabit broadband infrastructure to improve access to high speed connections throughout the region and promote economic growth.**
- 2. Assess State of Missouri guidelines and regulations to support “Smart City” technology to ensure the implementation process is allowed and provides incentives as appropriate.**
- 3. Integrate smart technology into infrastructure planning, development, and maintenance, especially in areas targeted for economic development.**
- 4. Institute a planning effort to identify “Smart City” infrastructure to enhance security, improve municipal services, and provide environmentally conscious solutions for City services, to connect all “Smart City” technology to a big data system, and to provide free public WiFi.**
- 5. Initiate “Smart City” infrastructure improvements to support NGA with crucial spillover and multiplier effects on enhancing security in the area, improving the delivery of City services, and providing publicly available internet service.**
- 6. Initiate Capital Asset Master Planning/Space Planning for St. Louis County government facilities.**
- 7. Continue regular Facility Condition Assessments for St. Louis County government facilities.**
- 8. Promote and implement Energy Efficient Mechanical and Lighting System Upgrades for St. Louis County government facilities.**
- 9. Support programs like PACE as an effective way to finance energy efficiency, renewable energy, and water conservation upgrades to buildings.**

GOAL 1.5

Increase access to the region's natural amenities and recreational opportunities by supporting the implementation of the regional greenways and trails system.

1. Continue to support and partner with Great Rivers Greenway on the implementation of the *River Ring Master Plan*.
2. Continue to support the implementation of the Gateway Bike Plan (including Phase III) to increase multi-modal commuting opportunities and access to public parks and amenities.
3. Continue to implement the Complete Streets policy in both the City and the County through collaboration with local leadership and municipal departments.
4. Implement final leg of River Des Peres Greenway (Phase 7) linking Francis R. Slay Park at Ellendale Avenue to Forest Park which serves as a connecting hub for the Centennial Trail, St. Vincent Greenway, and the Midtown Loop.
5. Develop a greenway in St. Louis County's Ag Tech District.

Investing in Infrastructure and Real Estate Development

INFRASTRUCTURE

GOAL 1.6

Support a variety of additional infrastructure improvements that increase access and safety for pedestrians and vehicles and further reduce barriers to pedestrian and bicycle connectivity.

- 1. Support initiatives to increase pedestrian safety, as noted in the Promise Zone goals.**
- 2. Support initiatives to increase bike safety (i.e., TrailNet's protected bikeways initiative).**

GOAL 1.7

Leverage the redevelopment potential of land and buildings on and adjacent to Lambert-St. Louis International Airport.

1. Focus early *Freight District Plan* implementation on and around the airport to substantially increase use of the airport to spread operational costs among more cargo flights.
2. Increase international cargo operations at the airport both to improve revenue potential and to encourage eventual increases in international passenger travel.

ST. LOUIS CITY

- Use the Roadway of Opportunity document to determine airport development.
- Support the Metro St. Louis Export Plan development by the World Trade Center of St. Louis.

ST. LOUIS COUNTY

- Obtain necessary state and local legislation to incentivize development on and immediately surrounding Lambert-St. Louis International Airport.
- Build out Northpark to the east of Lambert-St. Louis International Airport.
- Prepare the buy-out area west of Lambert-St. Louis International Airport for business development that will generate cargo traffic at the airport.
- Support commercial and industrial development northwest of the airport.
- Enhance access by improving Fee Fee Road Bridge and upgrading Gist Road with additional lanes.
- Support Lambert-St. Louis International Airport's creation of a Dual Customs Clearance facility, working with the country of Mexico to fast track customs clearance and increase two-way trade.

Investing in Infrastructure and Real Estate Development

REAL ESTATE DEVELOPMENT

GOAL 1.8

Stimulate sustainable infill development by leveraging existing and future transit nodes and emphasizing the redevelopment of under-performing commercial corridors.

1. **Secure and diversify private, philanthropic, federal, state, and local funding for public transportation projects, such as MetroLink, MetroBus, Bus Rapid Transit (BRT), and the St. Louis Streetcar.**
2. **Fully support, and assist in obtaining implementation funding for, the MetroLink alignment planning studies in the Northside-Southside corridor, the Metro North corridor, the Daniel Boone Corridor, and the Metro South Corridor.**
3. **Evaluate and adopt TOD incentive programs in St. Louis City and County.**
4. **Sponsor regular programs and conferences to inform and encourage growth in the TOD “industry” among real estate developers.**
5. **Support continued eastward expansion of the University City Loop area to and east of the Delmar MetroLink station.**

ST. LOUIS CITY

- Implement the Delmar Loop Station Area TOD Plan.
- Implement Skinker-Debaliviere Neighborhood Urban Design & Development Plan.
- Interface with the Loop Streetcar network.

6. **Emphasize TOD by implementing various plans prepared for areas around MetroLink Stations.**

ST. LOUIS CITY

- Place high priority on mixed-use redevelopment of the Forest Park station area including a parking structure to accommodate more vehicles than the surface lot supports today, street-level retail, and hundreds of additional housing units both as part of the parking structure and north to as far as Delmar Boulevard.
- Assure that the new Cortex MetroLink station is completed as planned.
- Work with Saint Louis University (SLU) to create a mixed-use development plan for the Grand MetroLink station that better links the station to the two campuses of SLU.

**ST. LOUIS
CITY**

- Fully participate in support of plans for renovation and rejuvenation of the activities in and around Union Station, taking advantage of the existing MetroLink station.
- Leverage the multi-modal transportation center at the Civic Center MetroLink station to accommodate, at the least, more bus routes and the St. Louis streetcar/MetroLink extension to the south of Downtown.
- Assist in completing all phases of Ballpark Village and redevelopment of Cupples Station sites to leverage the Stadium Station area.
- Assure that the Eighth & Pine MetroLink Station is maintained at full capacity and high quality to serve the burgeoning housing and office market in the Old Post Office District of Downtown.
- Study the potential options for America’s Center Convention Complex site to attract more visitors to the growing number of attractions and dining places surrounding the Convention Center MetroLink station.
- Finalize and construct mixed-use plans for the parking area and adjacent sites at the North Hanley MetroLink station.
- Fully support the efforts of Beyond Housing to implement the TOD plans for the Rock Road station.
- Complete the industrial and housing components around the Wellston station to conform to the recently completed Choice Communities plan and other job creating opportunities.

**ST. LOUIS
COUNTY**

Investing in Infrastructure and Real Estate Development

REAL ESTATE DEVELOPMENT

GOAL 1.9

Develop shared regional data and administrative systems to promote real estate development and reinvestment activity.

1. Create an asset mapping system to readily identify areas with developable land relative to stable communities and vibrant commercial corridors.

**REGIONAL/
CITY-COUNTY**

- Focus on the conversion of vacant, abandoned, and tax-delinquent properties into productive uses.

2. Refine and standardize land development and building regulatory codes across all jurisdictions.

**REGIONAL/
CITY-COUNTY**

- Enable sufficient flexibility and phasing for redevelopment projects.
- Reduce costs of compliance from jurisdiction to jurisdiction.

3. Create a “Vacant and Distressed Property” database and routinely field check for accuracy.

**REGIONAL/
CITY-COUNTY**

- Use as a basis for revising public policy options toward encouraging redevelopment and re-occupancy of such property.
- Share with the real estate brokerage and development sectors to stimulate private sector interest in large land assembly opportunities.

4. Assemble contiguous vacant and distressed properties into larger development sites suitable for attracting real estate developers.

**ST. LOUIS
COUNTY**

- Develop resources for the demolition of nuisance structures and the maintenance of vacant land.
- Establish processes in St. Louis County to more effectively take possession of derelict, tax delinquent properties.

**REGIONAL/
CITY-COUNTY**

- Use assembled property sites as incentives for attracting redevelopers.
- Prepare community-based redevelopment and highest-and-best-use plans to guide redevelopment on the assembled sites.
- Coordinate with other organizations and jurisdictions to identify alternate and complementary uses of the assembled land (e.g., Metropolitan St. Louis Sewer District’s initiative to use vacant land for absorbing and storing storm water).
- Coordinate public-private partnerships on sustainable practices such as green infrastructure.

GOAL 2.1

Leverage existing, or promote creation of new, tax credit programs, lending, and other funding programs that support entrepreneurs and the small business community.

1. Utilize investment tax credits to develop a source of start-up investment funds to attract and retain entrepreneurs and support related construction and real estate projects.
2. Develop additional programs to increase business and entrepreneurialism throughout the St. Louis region, including the addition, expansion, and retention of business.

ST. LOUIS CITY

- Develop incentive program and tenancing strategy to target business expansion in vacant spaces in Downtown St. Louis and throughout the City.
- Support increased efforts to fill vacancies in existing office buildings in Downtown St. Louis.

REGIONAL/ CITY-COUNTY

- Create fast track programs for business development (expansion, new location).

3. Increase financing programs for small businesses, including flexibility in financial offerings.
4. Use Section 108 funding as a loan tool for small businesses.
5. Continue support of state-funded On-the-Job Training Program.
6. Support the Missouri Extension Workshops offered at Career Centers that focus on entrepreneurship and small businesses.
7. Provide assistance with site selection as businesses grow and transition.
8. Offer incubator graduates assistance with the next phases of the business evolution.
9. Create clean and safe environments for small businesses to grow and flourish.
10. Support programs that provide legal information for persons interested in starting a business.

Supporting Entrepreneurship and Innovation

GOAL 2.2

Continue providing resources to nurture high-growth startups and technology firms in the region.

1. Concentrate on similar and compatible economic sectors to encourage more cross-entrepreneurship (e.g., Danforth Plant Science Center, Helix Center, Cortex, T-Rex, Nebula, St. Louis Makes).

REGIONAL/ CITY-COUNTY

- Create community development organizations that will target and foster innovation and qualities that innovation districts need.
- Create more public-private-philanthropic partnerships.
- Create more innovation districts.
- Sponsor a “St. Louis Shark Tank” to attract wealthy investors to St. Louis entrepreneurs.
- Sponsor “Ted Talk” presentations on innovation.
- Assist and expand micro lending/financial industry programs directed toward innovation.
- Dedicate funding for infrastructure needs identified in the Ag Tech District Innovation Hub Plan.

2. Expand, attract, and reinforce innovation and investment funds for:

REGIONAL/ CITY-COUNTY

- Start-up and in-between programs (resources + space), and co-working spaces.
- Promoting and attracting Innovative business/industry (regional sharing/benefits).
- Micro-lending programs.
- Educational/institutional collaboration around industry clusters.
- Curriculum to include entrepreneurship.
- Fashion incubators (entrepreneurship/manufacturing): link small run manufactures to the fashion industry.
- Shared manufacturing spaces and equipment.

GOAL 2.3

Support talent development, business innovation and new business creation for young professionals.

- 1. Enhance programs that assist young entrepreneurs in creating business plans.**
- 2. Expand the use of social media to communicate as broadly and frequently as possible with young professionals.**

Supporting Entrepreneurship and Innovation

GOAL 2.4

Expand opportunities for minority- and women-owned businesses.

1. **Expand outreach to minorities and women to increase the percentage of contracts awarded to minority and women-owned businesses.**
2. **Advertise and provide workshops to educate minorities and women business owners about potential opportunities.**
3. **Coordinate an effort to improve and strengthen Section 3 programs run by St. Louis County, St. Louis County Housing Authority, Lambert-St. Louis International Airport, City of St. Louis, and St. Louis Housing Authority.**
4. **Support the Missouri Extension Workshops offered at Career Centers that focus on entrepreneurship and small businesses.**
5. **Increase efforts to recruit minorities to County owned small technology-oriented incubators that have ties to funding and mentoring programs.**
6. **Create a fund offering patient capital to create sustainable businesses in minority communities to include the NGA site.**
7. **Fund scholarships for midlevel minority entrepreneurs to receive advance training in business principles at area community colleges, colleges, and universities.**
8. **Create incentives for minority and majority companies to partner and form joint ventures on projects utilizing City funds or that receive public assistance.**
9. **Continue to invest in compliance software designed to improve the ability of the City to better monitor and account for MWBE spending on contracts and professional services.**
10. **Encourage the creation of peer and mentorship networks for, and serve as clearinghouse of consolidated information related to, minority and woman business enterprises.**
11. **Advocate for minority and women business enterprise firms at the regional level with elected officials, educators, bankers, community leaders, and business corporations.**

GOAL 2.5

Continue expanding the St. Louis region as a hub for agriculture and bio-science innovation and technology.

- 1. Support BioStL's 2016 vision to continue promoting the growth of the biotechnology industry in the St. Louis region.**
- 2. Support the continued implementation of the projects in the *Cortex Master Plan*.**
- 3. Support the newly named "39 North" Ag Innovation District at the Danforth Plant Science Center in the City of Creve Coeur.**

Leveraging Our Assets

GOAL 3.1

Support and/or target business retention and expansion activities.

- 1. Engage proactively with businesses to provide support and assistance as they need resources to ensure business retention, expansion, job creation (increase finances, identify sites, assist with site selection), reduce and eliminate barriers.**
- 2. Pursue designation as a Certified Work Ready Community.**
- 3. Continue support of state-funded On-the-Job Training Programs that encourage business growth with highly trained employees.**

GOAL 3.2

Improve regional, national, and international connections for business growth.

1. Attract direct, non-stop flights from St. Louis to Europe, Asia, and other major international airports.

REGIONAL/ CITY-COUNTY

- Conduct comprehensive study to document the market demand for such flights.
- Expand efforts to encourage airlines to conduct international flights.
- Continue partnering with Lambert-St. Louis International Airport for international cargo activity, including live animal exports and dual customs approvals with Mexico.

2. Increase the number of successful EB5 foreign investments and otherwise expand EB5 presence.

3. Launch St. Louis' first foreign direct investment (FDI) program.

4. Implement Metro St. Louis' 2016 *Export Plan* in cooperation with the Brookings Institution and JPMorgan Chase.

5. Assist the Convention and Visitors Commission with necessary changes to America's Center Convention Complex in order to attract more and larger meetings of outside organizations and expose more people to St. Louis.

ST. LOUIS CITY

- Couple these changes with enhanced marketing of and transportation to regional events, entertainment, and dining.
- Investigate strategies that provide opportunities for parking personal automobiles once and getting around.

REGIONAL/ CITY-COUNTY

- Investigate the demolition of The Dome at America's Center to provide additional expansion opportunities.

Leveraging Our Assets

(continued from previous page)

6. Cultivate Downtown St. Louis retail development as a tourist destination to supplement conventions and sports events.

ST. LOUIS CITY

- Reinforce dense “nodes” of retailers through subsidies, if necessary, and relocations from scattered sites. Mercantile Exchange, Ballpark Village, and some of Washington Avenue are examples.
- Preserve and utilize temporarily vacant storefronts for pop-up shops tailored to conventions and special events.
- Support the Regional Tourism Infrastructure Projects: Scottrade Center, Convention Center, and Major League Soccer (MLS) stadium.

7. Expand the Regional Sports Commission’s marketing campaign outside St. Louis.

REGIONAL/ CITY-COUNTY

- Promote the region as a hub for regional amateur athletics, which attracts families for multiple days.
- Increase collegiate and Olympic-scale athletic tournaments to bring more constant attention to St. Louis.

GOAL 3.3

Improve internal and external perceptions of the region with marketing and outreach programs aimed at attracting and retaining talent and establishing a positive local identity.

1. Conduct a comprehensive study of successful regional promotional programs.

REGIONAL/ CITY-COUNTY

- Consider “global cities” as models.
- Identify campaign strategies.
- Identify sustainable funding resources.
- Prepare first-class marketing program for St. Louis region.

2. Implement a regional beautification strategy.

REGIONAL/ CITY-COUNTY

- Expand, fund, and aggressively manage an Adopt-A-Street Program (like Adopt-A-Highway).
- Conduct a persistent public service campaign to eliminate public trash.
- Support Gateway Greening and similar “green” sustainability programs to expand their educational outreach.

3. Enhance/expand stories from successful business people who have come back or choose to locate in St. Louis.

REGIONAL/ CITY-COUNTY

- Start with Fortune 1000 companies to reinforce the leadership that St. Louis has in these rankings.
- Emphasize the people and companies involved with technology development at the numerous incubators and related support compound.
- Push narratives about companies and people in the regionally-targeted industry clusters.
- Create regional marketing campaigns focused on St. Louis’ low cost of business operations, low cost of living with high amenities, and abundance of fresh water.

Leveraging Our Assets

(continued from previous page)

4. Persistently provide reliable information to “rankings publications” to assure St. Louis makes such lists more often.

REGIONAL/ CITY-COUNTY

- While often statistically faulty, such rankings keep St. Louis top-of-mind.
- The rankings provide St. Louisans, themselves, with positive conversational topics when with out-of-towners.

5. Continue concerted efforts to help raise awareness and understanding of events, activities, and initiatives throughout the region.

REGIONAL/ CITY-COUNTY

- Assure coordination of stories and events lists among organizations that create them.
- Expand conventional and unconventional methods of distribution through news media, social media, etc.

6. Create and sustain regional programs to reduce racism and the perception of danger/crime.

REGIONAL/ CITY-COUNTY

- Minimize negative stereotypes of urban locations with increased real estate investment and upbeat stories.
- Expand ethnic diversity and awareness programs, festivals, and interactivity.
- Increase educational achievements of minorities to enhance employment prospects and adaptability to business cycles.
- Increase resources throughout the region for community policing and related “grass roots” crime reduction programs.

GOAL 4.1

Develop and expand workforce development programs that focus on technical education, especially for individuals living in disadvantaged communities.

1. Expand technical post-secondary education at St. Louis Community College campuses, universities, and specialty schools.

**REGIONAL/
CITY-COUNTY**

- Bolster connections between employers, community colleges, and communities.
- Increase awareness of career opportunities.
- Support efforts of SCOPE 1.
- Bring tech programs into neighborhoods (rec-to-tech) - like LaunchCode, Blue 1647, Code Red.
- Explore creation of apprenticeship models.

2. Collaborate with community colleges, Workforce Investment Boards, workforce development centers, and employers to increase workforce training in both “hard” and “soft” skills.

3. Implement evidence-based strategies for hard-to-employ populations.

4. Support the successful operation of St. Louis City and County workforce offices and career centers.

5. Support the United Auto Workers’ *Labor Employment and Training Corporation* at Ranken Technical College.

6. Complete the buildout of the MET Center in Wellston and identify other potential opportunities for enhancement and expansion.

Developing Our Workforce

GOAL 4.2

Continue investing in multi-modal transportation options, trail systems, higher density housing, and walkable communities as means to attract and retain a mobile workforce.

- 1. Expand and diversify public transit to address desire for non-motorized transportation options.**
- 2. Implement Great Rivers Greenway's (GRG) bike share plan to better connect City and County neighborhoods and to appeal to an urban-oriented workforce wanting alternative modes for commuting and recreation.**
- 3. Support wider adoption of mixed-use and form-based zoning codes that include denser, market-rate housing in commercial districts and downtowns throughout the region.**

GOAL 4.3

Develop systems and partnerships that better link educational resources with employment opportunities.

1. Cultivate job creation through improved linkages between education and full-time employment.

**REGIONAL/
CITY-COUNTY**

- Expand apprenticeships, job shadowing, and internships to retain highly skilled and educated graduates of high schools, colleges, and vocational programs.
- Closely evaluate the model of the West Florissant Avenue Great Streets Implementation Plan (2016–2017).
- Implement the FULL CIRCLE - SLU/WASHU program modeled on campus Philadelphia.

2. Improve and increase targeted employment and career strategies for:

**REGIONAL/
CITY-COUNTY**

- Emerging workforce (new workers).
- Transitional workforce (e.g., military veterans, prisoners reentering the community).
- Existing workforce (keeping skills fresh).

3. Expand apprenticeship programs across all of targeted sectors and industry clusters.

4. Expand mentorship and job shadowing that encourages youth to consider rewarding careers.

Developing Our Workforce

GOAL 4.4

Create talent attraction and retention programs for higher educated and skilled individuals.

1. Increase and support college graduate retention efforts in partnership with universities.

REGIONAL/ CITY-COUNTY

- Work with universities to provide greater geographic orientation in metro St. Louis for freshman students.
- Introduce college students to different parts of region in courses designed around the "community as classroom."
- Conduct geographic-based career opportunity tours—jobs based on high quality places.
- Investigate incentives for young professionals to invest (buy homes, start businesses, etc.) in identified opportunity areas (prioritize Promise Zone, but incorporate all areas).
- Increase and support employer-assisted home buyer programs.

2. Fully support the attraction of more foreign immigrants to greater St. Louis who have skills and the education needed for growing business sectors.

REGIONAL/ CITY-COUNTY

- Incorporate the goals, strategies, and actions of the Mosaic Project.
- Support the International Institute of St. Louis in attracting and settling foreign nationals in the St. Louis area both to improve their economic well-being and to add needed population and labor force growth to the region.
- Support efforts of the World Trade Center and the Missouri Partnership to increase economic interaction with other countries by involving foreign-born residents with language, personal, and business connections.

GOAL 4.5

Accelerate opportunities for the region's foreign-born populations.

1. Increase foreign-born populations in St. Louis City and County.

REGIONAL/
CITY-COUNTY

- Successfully implement the Mosaic Program and meet its goal of making the St. Louis region the fastest growing metro area for foreign born by 2020.

2. Improve economic opportunities for foreign-born populations.

REGIONAL/
CITY-COUNTY

- Increase the number of professional connections for high-skilled, foreign-born residents.
- Increase the number of immigrant entrepreneurs in business incubators and other resources in the entrepreneurial ecosystem.
- Fill STEM gaps with foreign-born talent.
- Improve job training through better outreach and coordination.
- Support the International Institute's Adult Education program.
- Expand learning and training opportunities to improve the language skills of foreign-born people.

Developing Our Workforce

GOAL 4.6

Develop comprehensive STEM and early education resources and curricula to create a prosperous and highly adaptable future workforce.

1. Place special emphasis on science, technology, engineering, and mathematics (STEM) education.

REGIONAL/ CITY-COUNTY

- Develop comprehensive programs to strengthen STEM curricula throughout the region's school systems.
- Encourage emphasis also on the Arts (STEAM), including the humanities, to assure well-rounded education for K-12 students.
- Support "St. Louis Promise," which is based on Pittsburgh Promise, a commitment to college-bound students designed to decrease financial & other barriers.
- Expand A+ program in all schools.
- Support initiative to increase minority participation in STEM education (i.e. National Society of Black Engineers, coding programs, and others).

2. Increase access to and funding for early education programs to improve life-long employability.

REGIONAL/ CITY-COUNTY

- Expand various support systems from pre-natal to pre-K and K-12 pipelines.
- Ensure that employed parents have access to quality child daycare at affordable prices.
- Reinforce Head Start funding and other "early start" programs to help children achieve physical and mental goals more quickly and sustainably.
- Consider physical locations for services like schools and short term training: training needs to be placed in communities for maximum reach - neighborhood offices/outreach center.
- Direct more resources to children in high-need neighborhoods.
- Transform recreational centers to technical learning centers (particularly for ages 6+).
- Attract aggressive and successful teaching programs for challenged schools (e.g., Teach for America).
- Fund more after-school programs to ease strain on employed parents and to increase physical and mental education of children.

3. Increase education completion by young adults.

REGIONAL/ CITY-COUNTY

- Provide high quality affordable housing to assist families to stay in the home and to provide a stable environment for school-age children.
- Continue to support at-risk and disconnected youth through programs like *Doors to Success*, *Leadership & Resiliency Program*, and the *Center for Youth on the Rise*.
- Support Urban League’s in-school program.
- Link curricula of schools and training centers to high growth businesses, particularly in the bio-science, information systems, healthcare, aerospace, advanced manufacturing, and logistics sectors.
- Develop career pathways for high growth business sectors from pre-kindergarten through grade 12.
- Support greater opportunities for adult math and reading literacy.
- Promote early childhood education as a long-term means to develop a workforce with strong “hard” and “soft” skills.
- Support initiatives to improve third grade reading and math proficiency in targeted communities as a means to improve high school graduation and job readiness.

SECTION 7

METRICS

Performance measures must be established to evaluate the implementation and success of the goals and objectives of the CEDS. Traditionally, economic development metrics have focused primarily on job growth and levels of direct investment; however, these measures do not always paint a full portrait of success. The following performance measures aim to show broader ranges of achievement, including indicators of racial and gender economic equality, transportation infrastructure, entrepreneurship, educational attainment, higher incomes and property values, and increased transit usage.

STRATEGY 1

Investing in Infrastructure and Real Estate Development

INFRASTRUCTURE

GOALS	PERFORMANCE MEASURES
<p>1.1 Stimulate investment and reinvestment by supporting catalytic development and redevelopment with major infrastructure improvements and upgrades.</p>	<ul style="list-style-type: none"> >> Increased number of small business licenses obtained in the Promise Zone and North Riverfront. >> Increased high quality ratings on number of roads and bridges. >> Increased density of development (floor area and units per acre). >> Increased local government tax revenues generated. >> Increased employment in a diverse range of economic sectors in the targeted areas. >> Increased number of Great Streets plans completed and rate of growth in economic development in those corridors. >> Higher ratio of building permits issued in the Promise Zone relative to the rest of the region. >> Increase in environmentally sustainable development projects.
<p>1.2 Improve regional connectivity and reduce vehicle miles traveled by expanding multi-modal transportation options and adjusting land use and development incentive policies.</p>	<ul style="list-style-type: none"> >> Increased density of development near major stations and bus stops. >> Added overlay and related zoning regulations that incentivize TOD. >> Increased ridership on buses and transit trains commensurate with reduced driving per capita. >> Increased number of transit stops that are enhanced with shelters, furniture, LED signage, and the like. >> Reduced commuter vehicle miles traveled.
<p>1.3 Increase private real estate values, stimulate future investment and redevelopment, and provide multi-modal transportation opportunities through streetscape improvements, road diets, and appropriate street designs.</p>	<ul style="list-style-type: none"> >> Rate of increase in private property value in below regional median value locations that exceeds the rest of City and County. >> Reduced lane miles with roads still achieving high quality ratings. >> Increased expenditures by local, regional, and state government on pedestrian improvements.

INFRASTRUCTURE

GOALS

1.4

Promote "smart technology" and innovation to ensure stable energy and information networks for regional economic and job growth.

PERFORMANCE MEASURES

- >> Reduced rates of energy inputs for heating, cooling, processing, and related purposes.
- >> Reduced average utility bills for both residents and businesses in targeted areas.
- >> Implementation of and greater use of the implementation tools of both OneSTL and the City of St. Louis Sustainability plans.
- >> Increased ratio of transit ridership to automobile commuters.
- >> Increased access to broadband.

1.5

Increase access to the region's natural amenities and recreational opportunities by supporting the implementation of the regional greenways and trails system.

- >> Increased mileage of greenways, trail, and physical connections to and between parks and natural open spaces.
- >> Increased per capita spending on greenways, greenways, trail, and physical connections to and between parks and natural open spaces.

1.6

Support a variety of additional infrastructure improvements that increase access and safety for pedestrians and vehicles and further reduce barriers to pedestrian and bicycle connectivity.

- >> Increased ratio of commuting by bicycle and walking.
- >> Increased mileage of dedicated bicycle lanes and pathways.
- >> Increased investment in pedestrian infrastructure.

Investing in Infrastructure and Real Estate Development

REAL ESTATE DEVELOPMENT

GOALS

1.7

Leverage the redevelopment potential of land and buildings on and adjacent to Lambert-St. Louis International Airport.

PERFORMANCE MEASURES

- >> Increased landings at the Airport of both passenger and freight traffic.
- >> Increased investment in real estate development at and surrounding the Airport.
- >> Added tax revenues generated from real estate surrounding the Airport.
- >> Increased employment in areas surrounding Airport.
- >> Increased retail sales in areas surrounding Airport.
- >> Increased usage of Airport MetroLink stations.

1.8

Stimulate sustainable infill development by leveraging existing and future transit nodes and emphasizing the redevelopment of under-performing commercial corridors.

- >> Added overlay and related zoning regulations that incentivize transit-oriented development.
- >> Increased real estate investment in areas around transit stations.
- >> Increased employment and/or population in areas surrounding transit stations.

1.9

Develop shared regional data and administrative systems to promote real estate development and reinvestment activity.

- >> Increased views, downloads, users on existing, enhanced, or new regional property database websites or portals.

GOALS	PERFORMANCE MEASURES
<p>2.1 Leverage existing, or promote creation of new, tax credit programs, lending, and other funding programs that support entrepreneurs and the small business community.</p>	<ul style="list-style-type: none"> >> Increased number of small business licenses obtained. >> Increased annual startup rate. >> Increased employment from startups. >> Decreased business termination rate. >> Increased expenditures in tax credit programs or funding programs. >> Increased ArchGrants allocations. >> Documentation of new programs (or expansion of existing programs).
<p>2.2 Continue providing resources to nurture high-growth startups and technology firms in the region.</p>	<ul style="list-style-type: none"> >> Increased regional venture capital investment. >> Increased employment in technology-related sectors. >> Increased ratio of technology-related jobs within the City and County relative to the rest of the metro area.
<p>2.3 Support talent development, business innovation and new business creation for young professionals.</p>	<ul style="list-style-type: none"> >> Increased population of individuals with at least a bachelor's degree. >> Increased business licenses for young entrepreneurs. >> Increased patents and patent applications from new businesses.
<p>2.4 Expand opportunities for minority- and women-owned businesses.</p>	<ul style="list-style-type: none"> >> Increased participation rates for public sector investment. >> Increased certification rate for minority and women-owned businesses. >> Increased number of minority- and women-owned businesses. >> Increased wealth and income of minorities and women.
<p>2.5 Continue expanding the St. Louis region as a hub for agriculture and bio-science innovation and technology.</p>	<ul style="list-style-type: none"> >> Increased patent issuance rate. >> Increased employment at anchor institutions, organizations, and corporations. >> Increased investment by BioGenerator. >> Document annual performance measures compiled by BioSTL, the region's premiere bioscience advocacy organization. >> Increased number of companies in the global plant science corridor.

STRATEGY 3

Leveraging Our Assets**GOALS****3.1**

Support and/or target business retention and expansion activities.

PERFORMANCE MEASURES

- >> Increased numbers of jobs in existing businesses.
- >> Increased gross domestic product per employed worker.
- >> Increased personal income per employed worker.

3.2

Improve regional, national, and international connections for business growth.

- >> Increased value and volume of exports to foreign countries.
- >> Increased share of local gross domestic product generated by net exports.
- >> Increased number of jobs in foreign-owned businesses.

3.3

Improve internal and external perceptions of the region with marketing and outreach programs aimed at attracting and retaining talent and establishing a positive local identity.

- >> Increased placement of news stories and profiles of St. Louis area businesses.
- >> Increased followers on select social media platforms for St. Louis-based economic development, marketing, and chamber of commerce organizations.
- >> Increased “positive stories/mentions” and earned media circulation as reported by the St. Louis Convention and Visitors Commission.
- >> Increased annual visitors to the St. Louis region.
- >> Increased resources spent by the Regional Chamber and the CVC, among others, to promote greater St. Louis.
- >> Increased ratio of jobs within the City and County relative to the rest of the metro area.
- >> Increased views, downloads, or users for online materials provided by the St. Louis Regional Chamber, St. Louis CVC, and other economic development organizations.
- >> Increased publicity about the abundant natural and utility resources in the region including low costs of living and business operations.

GOALS	PERFORMANCE MEASURES
<p>4.1 Develop and expand workforce development programs that focus on technical education, especially for individuals living in disadvantaged communities.</p>	<ul style="list-style-type: none"> >> Increased share of the workforce with bachelor's degrees. >> Increased job advertisements for STEM-related jobs. >> Increased participation rates at area workforce development centers. >> Increased number of individuals with at least an associate's degrees in Promise Zone. >> Increased proportion of households earning more than \$35,000 annually in Promise Zone.
<p>4.2 Continue investing in multi-modal transportation options, trail systems, higher density housing, and walkable communities as means to attract and retain a mobile workforce.</p>	<ul style="list-style-type: none"> >> Added overlay and related zoning regulations that incentivize TOD. >> Increased ridership on transit facilities. >> Increased ratio of transit ridership to automobile commuters. >> Increased proportion of households aged 35 or younger with at least a bachelor's degree. >> Increased population in targeted areas and/or near transit stations.
<p>4.3 Develop systems and partnerships that better link educational resources with employment opportunities.</p>	<ul style="list-style-type: none"> >> Increased jobs fairs and participation rates. >> Increased direct hires from workforce development centers, vocational schools, technical institutes, and community colleges.
<p>4.4 Create talent attraction and retention programs for higher educated and skilled individuals.</p>	<ul style="list-style-type: none"> >> Improved number and attendance at events designed to encourage college students to learn about and remain in greater St. Louis. >> Increased net migration for persons 25-34 years old.

Developing Our Workforce

GOALS

4.5

Accelerate opportunities for the region's foreign-born populations.

PERFORMANCE MEASURES

- >> Increased ratio of foreign-born and minority populations in the labor force.
- >> Increased rate of foreign immigration.
- >> Foreign-born employment and educational rate commensurate with regional averages.

4.6

Develop comprehensive STEM and early education resources and curricula to create a prosperous and highly adaptable future workforce.

- >> Improved STEM-related scores on national exams taken by area youth.
- >> Increased employment in STEM-related occupations by graduates of St. Louis area schools and universities.

APPENDIX

The following brief summaries are drawn from the 2013 *TOD Framework Plan* and are reproduced here for those station areas in St. Louis County and the City of St. Louis which show the most promise for TOD in the next five years. The summaries here are only those for which Bi-State Development, which operates the MetroLink system, has identified TOD potential and where some notable activity is underway or strongly planned with development entities. Most of these station areas already have some specific planning and/or development underway. This CEDS document may serve as a means to catalyze financing and development.

The following profiles are drawn from: <http://www.onestl.org/resources/reports/transit-oriented-development/311-metrolink-station-area-profiles>

Excluded stations are the two at Lambert-St. Louis Airport and the two at the University of Missouri-St. Louis. The areas around these four stations are not readily available for private development since they are generally within the confines, or heavily influenced by, the airport or the university.

Added, however, is a brief profile of the to-be-constructed Cortex Station between the Grand and Central West End stations. At the time of publication of the following profiles during the OneSTL planning process, the Cortex Station was not in the inventory. Technically, it still is not part of the inventory because it is not yet built, but plans show it completed within the timeframe of this CEDS.

Downtown Station: Arch-Laclede's Landing

The Arch-Laclede's Landing Station directly serves two of the region's most recognized landmarks, the Gateway Arch/Jefferson National Expansion Memorial, and the Laclede's Landing Historic District. The entire southern portion of the station area is occupied by the Arch Grounds. North of Washington Avenue lies the historic Eads Bridge and Laclede's Landing, a national Historic District containing several blocks of three- to six-story, 19th century warehouse and commercial buildings that have been converted for modern office use. Most of these buildings contain ground floor retail space,

largely tenanted by restaurants, bars, and other entertainment uses; currently, there are no residential units on the Landing. North of the Landing sits Lumiere Place, a large-scale development containing a two-story casino and retail building; a 22-story hotel; an eight-story hotel; a four-story parking garage; and numerous surface parking lots. The western portion of the station area includes a small part of the Downtown commercial core, mostly developed with a mix of modern and 19th century mid-rise and high-rise office buildings.

Downtown Stations: 8th & Pine and Convention Center

The 8th & Pine and Convention Center Stations are located in the heart of Downtown St. Louis. The combined quarter mile station area covers a wide array of commercial office towers, including pre-World War II, mid-rise buildings that rise to their full heights without a setback, and modern high-rise towers that use setbacks in order to build taller while providing more light to streets below. Most of these buildings provide ground-floor retail space, and many incorporate parking garages either below ground or within the building's lower floors. The combined station area also includes a section of Washington Avenue, one of the region's most iconic mixed-use districts and the recipient of the American Planning Association's "Great Streets" award. The eastern section of Washington Avenue, closer to the Riverfront, contains the large America's Center Convention Complex, including the Cervantes Convention Center, The Dome at America's Center, the St. Louis Executive Conference Center and the Ferrara Theatre, as well as several hotel towers ranging from 15 to 25 stories in height. The western section of Washington Avenue, past 9th Street, is part of Downtown St. Louis' residential neighborhood, which includes parts of Locust and Olive Streets. Most of the buildings in this area are six- to eight-story, 19th -century warehouse and commercial buildings converted to residential uses, most with ground-floor retail, dining, and entertainment.

Downtown Station: Stadium

The Stadium Station is located in the very southern portion of Downtown St. Louis, directly adjacent to Busch Stadium and in close proximity to I-64, the Gateway Mall, and the Riverfront. The area immediately surrounding the Stadium Station is occupied by Busch Stadium, block-long parking garages, and Ballpark Village. Blocks farther west hold the Cupples Station complex, a group of mid-rise 19th century warehouse buildings being redeveloped into a mixed-use and entertainment district. Buildings farther toward Downtown's commercial core and the Riverfront scale up to 20-40 story towers, many with two- to three-story retail bases. Most of these towers are hotels or office buildings, but one of them contains residential apartments and condominiums. The area south of the Stadium contains a few single-story commercial uses and one four-story apartment building, but is mostly occupied by large surface parking lots.

Downtown Stations: Civic Center and Union Station

The Union Station and Civic Center MetroLink Stations serve the southern edge of Downtown St. Louis, providing easily-walkable transit connections to most of Downtown's civic institutions and large entertainment venues. The combined station area includes the stretch of Market Street between North 20th Street and Tucker Boulevard, which hosts most of Downtown St. Louis' civic institutions and several high-demand regional attractions, including Union Station, Scottrade Center, the refurbished Peabody Opera House, St. Louis City Hall, the U.S. Postal Service's Main Branch, and several courthouses. The northern edge of the station touches the edge of Downtown's commercial core, and contains mid-rise office buildings and a residential complex of several 13-story towers. The eastern portion of the station area contains mostly private-sector office and industrial buildings ranging from four to twenty stories, as well as a 13-story hotel. The area south of I-64 is almost entirely occupied by freight railroads and surface parking lots.

Grand Station

The Grand Station provides a direct light rail connection to one of the region's busiest and most densely-developed corridors, Grand Boulevard. The MetroLink rail line is in the same right-of-way as an active freight railroad, and lies under the Grand Boulevard Bridge, which is currently being completely reconstructed. The station is adjacent to Saint Louis University's main campus, and several SLU buildings are within or just outside the quarter-mile station area. The quarter-mile station area also contains a high-density residential development across Grand Boulevard from SLU's campus, which includes a 26-story residential tower; a 16-story residential tower; a three-story mixed-use building; and a one-story commercial property. Metro's primary maintenance shop is at the very eastern edge of the station area, and Goodwill Industries recently repurposed a vacant, seven-story commercial building at the western edge of the station area as a retail outlet and distribution facility. The remainder of the station area is occupied by heavy industrial uses and open storage lots, many of which are now vacant.

Cortex Station

The to-be-constructed MetroLink station at Cortex will serve area employees travelling to work in the Central Corridor from residential areas throughout the region, residents of Cortex and the surrounding neighborhoods, those connecting to the light rail system via bus who will travel to work in other regional employment centers, bike commuters and recreational cyclists, and park-and-ride users utilizing transit for work or recreation. The Cortex Station will help connect these neighborhoods to centers of employment, education, and services served by the transit system. By connecting disadvantaged residents to transit, the project will provide access to opportunity and help expand the middle class. Likewise, the project will also connect job centers in Cortex with populations outside of the Central Corridor. A sizable percentage of the jobs within Cortex will be open to those with less than a college education. As such, there will be tremendous opportunity for low income and disadvantaged populations to gain employment in Cortex. This project will allow these populations to be connected to the Cortex job center via transit,

as the existing MetroLink system serves several low income and economically disadvantaged communities in the region.

Central West End Station

The Central West End Station serves a variety of major regional attractions: the BJC/Washington University Medical Center, Forest Park, and two diverse, mixed-use urban neighborhoods, one established and still thriving, the other currently experiencing significant revitalization and redevelopment. The Central West End station lies at the center of the BJC-Washington University Medical Center, which provides an excellent local example of industrial and office-based transit-oriented development. The Medical Center is a high-density complex of medical, academic, and residential towers ranging from five to twenty stories. Buildings generally scale down in size as they approach residential neighborhoods to the north and south, as well as the industrial area east of Taylor Avenue. Clayton Avenue hosts the three-story Central Institute for the Deaf and several smaller medical offices. Forest Park Boulevard contains a variety of building types, ranging from a half-block, four-story residential building to a new 15-story, mixed-use tower on Euclid Avenue. The eastern portion of the station area is more industrial in nature, including smaller office buildings, large parking garages, and several surface parking lots.

Forest Park – DeBaliviere Station

The Forest Park-DeBaliviere Station serves a highly diverse population living in a dynamic, mixed-use neighborhood. DeBaliviere Avenue serves as the neighborhood's "Main Street," running north-south through the heart of the community between the many attractions in Forest Park and the vibrant Delmar corridor. DeBaliviere Avenue hosts a range of uses, including single-story commercial strips, apartment buildings, and several community facilities. The eastern half of the neighborhood is primarily developed with three- to five-story apartment buildings, while the western half hosts two-story, single-family homes. The station area lies within three of the City's historic districts and

has a very strong, intact architectural character.

Delmar Loop Station

The Delmar Loop west of Skinker Boulevard has been a revitalized "lifestyle" district and a regional attraction for over two decades, and was designated one of America's "Great Streets" by the American Planning Association. Over the past ten years, that activity has spread East of Skinker, in the City of St. Louis, and the East Loop District now contains a seven-story hotel, a large and medium sized concert venue, and several blocks of two-story office/retail buildings and a large residential building. The area south of Delmar Boulevard is part of the historic Skinker-DeBaliviere neighborhood, and contains a mix of two- and three-story apartment buildings and single-family homes. The area north of Delmar and east of the MetroLink rail line is another residential neighborhood with a similar development pattern, though those homes tend to be on wider lots and show more signs of disrepair than those south of Delmar. The remainder of the station area, north of Delmar and west of the MetroLink rail line, is occupied by large industrial uses and Washington University's North Campus, as well as several large surface parking lots.

Wellston Station

The Wellston Station serves the industrial and business core of an inner-ring suburban community in North St. Louis County. The quarter-mile area around the Wellston Station is primarily occupied by industrial uses, mostly one- and two-story buildings with large footprints, surface parking, and open storage. The station core also holds a six-story industrial/workforce development office; a research laboratory; one of St. Louis County's Enterprise Centers; a County police and fire training academy; and a high school. The eastern and western edges of the station area host residential neighborhoods consisting of one- and one-and-a-half story, "ranch"-style single-family homes. Homes in the western part of the station area, west of Sutter Avenue, have higher occupancy rates and tend to be better maintained than those east of Stephen Jones Avenue.

Rock Road Station

The Rock Road Station is located on St. Charles Rock Road, one of the region's major commercial corridors. Most of the land around the MetroLink Station itself is developed with industrial and commercial uses, though there are also several large vacant parcels in the immediate vicinity. Residential neighborhoods of single-family homes are located about a block away from the station on all sides. The quarter-mile station area also benefits from the presence of considerable open space and community facilities, including St. Peters Cemetery, Normandy High School, Bethany Cemetery, and the Pagedale Family Support Center. There are several large vacant parcels in the immediate vicinity, as well as several apparently vacant industrial sites.

North Hanley Station

The North Hanley Station serves a diverse population living in an area with a mixed suburban development pattern. Interstate 70 runs east-west through the heart of the station area, and North Hanley Road serves as its major north-south thoroughfare. The residential neighborhood consists of single-family detached homes south of the MetroLink station, and two-story apartment buildings west of North Hanley Road. The station is in close proximity to the University of Missouri St. Louis campus, and is surrounded to the north and east by large corporate campuses, most notably Express Scripts and the NorthPark business park.

Skinker Station

The Skinker Station provides a gateway to Washington University's main campus and the historic residential neighborhood that surrounds it. The station is located at the border between University City and St. Louis City, and serves a mix of residents, students, University employees, and visitors. One-quarter of the station area is occupied by WUSTL's campus, mostly academic buildings, surface parking lots, and the University's iconic Brookings Hall. East of Skinker Boulevard lies Forest Park and the Catlin Tract Historic District,

consisting of two- and three-story single-family homes on one-acre lots. The historic Skinker-DeBaliviere neighborhood lies directly north of Forest Park Parkway, east of Skinker, and contains both three-story apartment buildings and two- or three-story single-family homes. The Parkview Historic District lies west of Skinker and consists entirely of two- and three-story, pre-World War II single-family homes. Farther north along Skinker, well outside the quarter-mile station area, is the Delmar Loop mixed-use entertainment district.

University City - Big Bend Station

The U-City – Big Bend Station primarily serves Washington University's main campus and the historic residential neighborhood that surrounds it. Fontbonne University's campus is also located nearby, farther south along Big Bend Boulevard, but is well outside the quarter-mile station area. Around a quarter of the station area covers WUSTL's campus, largely student housing apartments and athletic facilities. The MetroLink Station is adjacent to a small commercial node that includes a three-story mixed-use building, two single-story commercial buildings, and a surface parking lot. The remainder of the station area is developed with pre-War, two-story single-family homes, many within gated subdivisions. The northeastern portion of the station area just touches the edges of the Delmar Loop mixed-use entertainment district, including the Center of Creative Arts (COCA) and the 560 Music Center.

Forsyth Station

The Forsyth Station serves the more residential and mixed-use parts of Downtown Clayton, as well as a portion of University City. Forsyth Boulevard and Forest Park Parkway both run east-west through the station area. This section of Forsyth is a very mixed-use corridor containing two- and three-story apartments and mixed-use buildings; single story commercial strips; small offices; the Washington University west campus; the Centene Corporation headquarters; and the Plaza in Clayton complex, which includes a 31-story residential tower, an 18-story hotel, an eight-story mixed-use building, and a four-story parking garage. The area immediately surrounding the MetroLink

Station includes a large surface parking lot, one- and two-story commercial buildings, and a very large vacant lot between the station and the Plaza complex. The remainder of the station area covers residential neighborhoods developed with two-story single-family homes.

Clayton Station

The Clayton Station serves as St. Louis County's central business district and the St. Louis region's second-largest employment center. Clayton's downtown core offers limited residential options in high-rise towers along South Brentwood Boulevard, but most of the core is developed with mid- and high-rise commercial office buildings and ground-floor retail. Downtown Clayton also hosts the St. Louis County Government Center, including the County Government Building, County Police Headquarters, the County Justice Center, and St. Louis County Circuit Court. The portion of the station area south of Forest Park Parkway is occupied by a residential neighborhood of single-family homes, with a small number of two-story apartment buildings near Hanley Road and Brentwood Boulevard. Forest Park Parkway and Brentwood Boulevard are major vehicular and MetroBus corridors through the station area.

Richmond Heights Station

The Richmond Heights MetroLink Station serves a regional commercial core within an inner-ring suburban community. The station is located near the intersection of four major corridors: I-64, I-170, South Brentwood Boulevard, and Clayton Road. South Brentwood Boulevard runs north-south through the area and is lined with regional commercial attractions, including the Saint Louis Galleria, The Boulevard mixed-use development, several office buildings, and single-story commercial strips. Clayton Road is a busy commercial corridor hosting smaller-scale, more locally-oriented businesses. The area east of Linden Avenue is a residential neighborhood of one- to two-story, single-family and two-family homes.

Brentwood – I-64 Station

The Brentwood – I-64 Station sits near the intersection of two major highways, I-64 and I-170. It provides direct transit service to residential neighborhoods in two inner-ring suburban communities, Brentwood and Richmond Heights, as well as a regional shopping and office district. The area immediately surrounding the Brentwood station is developed with a regional shopping center of single-story retail strips and “big box” stores with very large surface parking lots. This area also contains the Meridian at Brentwood development, which includes an eight-story office tower, a nine-story parking garage, and a two-story retail/office complex, all adjacent to the MetroLink Station. The southernmost portion of the station area, along Hanley Industrial Court, is occupied by single-story, large-footprint industrial uses. The remainder of the station area, north of I-64 and east of Hanley Road, contains residential neighborhoods of single-family homes.

Maplewood Station

The Maplewood Station serves a largely industrial and commercial section of a revitalized, mixed-use inner-ring suburban community. Manchester Road runs east-west through the heart of the station area, and South Hanley Road and Laclede Station Road provide major north-south connections. These sections of both Manchester and Hanley Road are primarily developed with one- and two-story industrial uses with large footprints and surface parking lots, as well as smaller, single-story commercial buildings. Laclede Station Road contains a considerable number of two- to three-story garden apartment complexes, and the remainder of the quarter-mile station area is a residential neighborhood consisting of one- to two-story single-family homes.

Sunnen Station

The Sunnen Station serves an inner-ring suburban community with a very mixed development pattern. The area immediately surrounding the station is developed with a planned development, the Sunnen Business Park, which contains several large office buildings. The remainder of the quarter-mile area around the Sunnen Station is split almost evenly between one- and two-story commercial and industrial uses with large footprints, and one- and two-story single-family homes. There also are a limited number of two- and three-story garden apartment buildings along Laclede Station Road, north of the Burlington Northern railroad. Hanley Road and Big Bend Boulevard serve as major north-south thoroughfares for the station area, while Manchester Road carries traffic east-west just north of the quarter-mile station area.

Shrewsbury Station

The Shrewsbury Station is located at the border between the Cities of St. Louis and Shrewsbury, near the intersection of Lansdowne Avenue and River Des Peres. The station serves an inner-ring suburban area with a mixed development pattern. The MetroLink Station, MetroBus transfer loop, and 800-space Park-Ride Lot occupy a significant portion of the quarter-mile station area. Most of the land on both sides of the river is developed with one- and two-story single-family detached homes. However, there is also a node of commercial and industrial uses near the intersection of Lansdowne and St. Vincent Avenues, adjacent to the Shrewsbury Station, and a number of two- and three-story garden apartments along River Des Peres south of Lansdowne Avenue, across from Willmore Park.

Future Transit Stations

Both St. Louis City and, separately, St. Louis County are embarking on major transit corridor studies at the end of 2016. To be overseen by steering committees that include representatives of the City and County jointly, several potential corridors will be studied.

In the City, the long-proposed Northside-Southside light rail line with connections in and through Downtown St. Louis will be studied. The proposed NS-SS line would extend from Goodfellow Avenue and Interstate 70 in North St. Louis City with stops along Natural Bridge Road and near the proposed National Geospatial-Intelligence Agency headquarters site and North Riverfront. The line would then provide direct access to Downtown St. Louis and extend west on Chouteau Avenue and south on Jefferson Avenue to Interstate 55 with additional stops in South St. Louis County.

Within the City, the trains may operate as streetcars. In fact, most of the alignments will be on existing streets and a goal is to have more frequent stops and slower speeds than a traditional light rail network. Upon reaching the suburbs, the trains would operate more like light-rail at higher speeds with fewer stations and, as much as possible, in dedicated rights-of-way.

Three separate lines are to be studied in St. Louis County, all of which would connect with existing or future transit lines in the City. One of the three new lines would extend into north St. Louis County, one to western reaches of the County, and the third into south county. These lines would operate as traditional light rail routes with higher speeds than streetcars and less frequent stations.

The consulting team for the Northside-Southside line will complete the pre-engineering study by the spring of 2018. The three lines in St. Louis County will have study completion dates of late 2018.
